

Jlivo Builds AI Livestream “Control Tower” in Dallas to Modernize Drop-Shipping Operations Worldwide

Ten years of cross-border experience distilled into a single platform that unifies virtual hosts, product intelligence, and fulfillment visibility.

New York City, New York Mar 11, 2026 ([Issuewire.com](https://www.Issuewire.com)) - Jlivo Inc. ([jlivo.com](https://www.jlivo.com)), headquartered at 2050 N Stemmons Fwy Unit 139 in Dallas, is rolling out an AI-driven Livestream Commerce Control Tower that re-engineers how global sellers run B2B e-commerce and drop-shipping programs. The launch leverages more than a decade of operational expertise to replace fragmented “traditional” workflows with a synchronized, data-first approach.

“Brands have been juggling separate livestream studios, sourcing spreadsheets, and opaque logistics portals for far too long,” said Allen, Founder and CEO of Jlivo. “We built the Control Tower so every cross-border decision—what to sell, who presents it, how it ships—draws from the same real-time intelligence layer.”

Three Pillars of the Jlivo Control Tower

- **Always-On AI Hosts**

Jlivo’s AI LiveHost™ avatars broadcast in multiple languages, auto-generate compliant scripts for TikTok Shop, YouTube Shopping, Amazon Live, and answer buyer questions based on live

ERP/OMS data.

- **B2B Product Intelligence Layer**

The B2B Insight Graph spans 3,000+ factories and brands, forecasting order volume, suggesting wholesale prices, and flagging compliance risks so merchants no longer rely on manual research or siloed Excel files.

- **Trusted Drop Network Visualization**

With sensors across 18 forward warehouses in North America, Europe, and Southeast Asia, the platform surfaces delivery success, return spikes, and anomaly alerts—turning black-box drop shipping into an auditable, customer-ready experience.

Upgrading Traditional E-Commerce Playbooks

Jliveo's decade-long SOPs power a structured migration path for teams moving off traditional e-commerce stacks:

- **Automation-first workflows** replace labor-intensive livestream scheduling and training.
- **Unified decision dashboards** aggregate merchandising, marketing, and logistics signals in a single interface.
- **Compliance-by-design** models scan every script and promotion for policy violations, reducing the legal drag that plagues manual operations.

Early Access and Partnerships

- **60-Day AI Livestream Co-Creation Program** for pilots in consumer electronics, home & living, beauty, and lifestyle categories.
- **Partner API** so agencies, OEM manufacturers, or marketplaces can embed Jliveo's AI host and supply-chain telemetry into their own portals.
- **Global Channel Playbooks** offering ready-to-deploy tactics for North America, LATAM, and Southeast Asia, ensuring local nuance without rebuilding from scratch.

Jliveo currently collaborates with 40+ overseas drop-shipping centers and 300+ manufacturing partners, with plans to extend its European fulfillment coverage to 30 nodes by 2026.
