

# King Omega went from Storms to Sound with His Album ‘King of Science’

**Alabama, United States Mar 11, 2026 ([IssueWire.com](https://www.IssueWire.com))** - Kendall Foster, also known as **King Omega**, is willing to amuse music enthusiasts with his exclusive pieces of music. He always had the dream of becoming a historic artist, music maker, entrepreneur, author, and scientist. At the beginning, it all felt impossible, but when the global star, Taylor Swift, came to his high school, her speech motivated the artist to the core. It made him believe that everything is possible with self-belief and hard work. Now, he has come up with his debut album, named ‘**King of Science**’. This album is really special for the artist because there was a tornado outbreak on 27th April, 2011. And he marked the date on his calendar one month before it hit. In addition to that, he also heard his last name screaming on the local news. It can be said that the tornado is his claim to fame, which is why he came with this specific stage name.

This music creation has both art and science, which is truly mesmerizing. In this album, he has given a total of 12 soundtracks. Each of them has an innovative charm and a catchy storytelling. ‘So Fly’ is one of the songs from the album, which is a blend of creative works, anime concepts, and scientific hypotheses. Along with these, the fascinating plots and storytelling have made the tracks of this album even more captivating. **King Omega** has given many other songs in ‘**King of Science**’. A few of them are ‘99 Bottles’, ‘Get Back Up’, and ‘Dynamite’. Listen to them on [Spotify](#) and Apple Music. Also, follow him on these platforms to get updates on his upcoming release, ‘Discovery’.
