

Panda Exchange: A Global Premier Digital Trading Ecosystem for Physical Assets

Ararat, Armenia Mar 28, 2026 ([Issuewire.com](https://www.issuewire.com)) - Panda Exchange, a strategic flagship project by Panda Ecology (Hong Kong Entertainment International Holdings Limited HK.08291), seamlessly integrates the core strengths of CeFi efficiency and DeFi transparency with security. Focusing on digital issuance, differentiated trading, lending, and smart asset management of global top-tier real-world assets (RWA), it achieves equal rights for cryptocurrencies and stocks, establishing a next-generation global premium asset trading platform and pioneering a new era of digital finance for physical assets!

Establishing Strong Background Framework to Shape New Global Asset Trading Landscape

Building on the robust strategic foundation of Panda Ecology from Hong Kong Entertainment International Holdings (HK.08291), Panda Exchange adopts a global perspective with digitalization of physical assets as its core focus, bridging the gap between tangible assets and digital finance. Powered by scientific probability models, the platform seamlessly integrates the proven systems of traditional finance with the innovative advantages of blockchain technology. It delivers professional and diversified physical asset financial services to global investors, enabling efficient asset circulation and value appreciation.

Professional risk control safeguards, fortifying asset security defenses

Backed by the seasoned financial operations team of Hong Kong Huaxia Group, we have established an institutional-grade professional risk control system to ensure transaction security and regulatory compliance throughout the entire process. With years of expertise in the financial sector and extensive risk management experience, our team has built robust safeguards for platform operations, asset trading, and fund management. This enables investors to engage in global physical asset transactions with confidence while maintaining controlled risks.

Innovative strategies empower businesses to unlock new possibilities for stable and high returns

Tailored for perpetual contract traders, this solution delivers risk-controlled stable returns through an

exclusive long-short balanced hedging strategy. By integrating hedging mechanisms with large-scale probability theory and leveraging extensive real-world data, we develop professional quantitative trading models that balance market risks via scientific strategies to ensure consistent profit growth. The platform projects a static monthly return range of 40%-100%, creating a robust closed-loop return system for investors through advanced quantitative capabilities.

Build an ecosystem for mutual benefit and create a sustainable trading system

Panda Exchange consistently upholds the core philosophy of achieving mutual value benefits among trading users, platform advocates, and Panda Platform itself. With efficiency, transparency, and sustainability as its ecological development goals, it strives to build a fair and open global physical asset trading ecosystem. Here, investors can access professional asset trading and asset management services, while brokers leverage the platform ecosystem to expand their business horizons. Through collaboration with ecosystem partners, the platform drives the continuous advancement of the global digital financial ecosystem for physical assets.
