

Sacramento Aesthetic Surgery Introduces Motiva Breast Implants for Natural, Movement-Based Aesthetics

Discover a new era in breast augmentation as Sacramento Aesthetic Surgery unveils implants that adapt to your body's natural movements, offering a seamless, authentic aesthetic experience.

Sacramento, California Mar 29, 2026 ([Issuewire.com](https://www.Issuewire.com)) - Sacramento Aesthetic Surgery, under the leadership of board-certified plastic surgeon Dr. Donald Hause, announces its latest advancement in breast augmentation technology with the integration of [Motiva Breast Implants](#). This innovative step sets

the clinic apart in Sacramento by focusing on natural, movement-based aesthetics, addressing a growing demand for subtle, authentic outcomes in aesthetic surgery.

The transition to Motiva Breast Implants signifies a major shift from traditional, static implants to ones that naturally move with a patient's body. The Motiva system leverages proprietary technologies such as Ergonomix™ and ProgressiveGel®, alongside innovative surface texturing techniques, creating an implant that adapts to natural body movements and mimics the feel of natural breast tissue. This novel approach aligns with Sacramento Aesthetic Surgery's mission to achieve seamless, biological harmony in breast augmentation.

Dr. Hause, a pioneer in aesthetic advancements, underscores the challenge inherent in older implants, which often resulted in artificial appearances and chronic inflammation. Motiva addresses these concerns with biocompatible materials and gravity-adaptive designs, which resist the "uncanny valley" effect—where surgical results appear overtly "done." The result is a breast augmentation that not only moves but feels natural, ultimately enhancing patient confidence and body image.

"As we redefine aesthetic standards, the introduction of Motiva Breast Implants to our Sacramento practice represents a significant leap forward," comments Dr. Donald Hause, head surgeon at Sacramento Aesthetic Surgery. "Our goal is to marry cutting-edge technology with our clinical expertise to provide outcomes that enhance our patients' natural beauty and sense of self."

The strategic vision of Sacramento Aesthetic Surgery follows a "Natural Revolution" in aesthetics, prioritizing subtle, biological harmony over dramatic changes. Dr. Hause's refined techniques and use of Vectra 3D Imaging align patient expectations with surgical realities, ensuring personalized, predictable outcomes that resonate with today's aesthetic values—valuing safety, authenticity, and patient-centric service.

Motiva's advanced features include the Ergonomix™, which adapts in real-time to body position, and the ProgressiveGel®, offering an ideal balance of elasticity and firmness. The SilkSurface™ and VelvetSurface™ texturing optimize biocompatibility, minimizing inflammation and extending implant longevity. These features collectively position Sacramento Aesthetic Surgery as a leader in innovative, personalized care.

"The introduction of Motiva implants isn't just an upgrade in technology; it's a fundamental evolution in how we think about aesthetic surgery," said a representative from Sacramento Aesthetic Surgery. "This advancement profoundly impacts our ability to offer patients results that are both visibly and physically integrated with their natural selves."

Ultimately, the shift to Motiva implants by Sacramento Aesthetic Surgery redefines standards within the aesthetic community, emphasizing outcomes that are as durable as they are elegant.
