

Sanghvi Movers' 1,600 MT Crawler Crane: Powering the Critical Path of India's Mega Infrastructure Projects

Mega-Lifts for Mega-Projects: Sanghvi Movers' 1,600 MT Powerhouse

Pune, Maharashtra Mar 17, 2026 ([IssueWire.com](https://www.issuewire.com)) - Sanghvi Movers Limited (SML), Asia's largest and the world's fifth-largest crane rental company, is reinforcing its commitment to the nation's growth by highlighting the pivotal role of its high-capacity crawler crane fleet in shaping the modern Indian landscape. As the primary provider of heavy lift crane services for the country's most ambitious developments, SML continues to leverage its flagship 1,600 MT crawler crane to execute high-precision maneuvers for mega infrastructure projects across the energy, refinery, and industrial sectors.

In an era where India's infrastructure demands are scaling at an unprecedented rate, the presence of a locally available 1,600 MT asset is a strategic necessity. By maintaining and actively deploying this massive crawler crane, Sanghvi Movers ensures that Indian EPC (Engineering, Procurement, and Construction) firms have immediate access to world-class industrial heavy lifting equipment without the delays or complexities of international mobilization.

A Cornerstone of India's Infrastructure Landscape

The 1,600 MT crane represents the pinnacle of large-scale construction crane technology in the SML fleet. It is specifically designed to handle the "ultra-heavy" category of lifting -components that define the core of India's industrial future, such as 1,000-tonne reactors, massive wind turbine nacelles, and heavy structural modules for nuclear power plants.

"Our 1,600 MT crawler crane is not just an asset; it is a critical enabler for India's industrial self-

reliance," said Rishi C. Sanghvi, Managing Director of Sanghvi Movers Limited. "While many projects historically looked abroad for such high-capacity lifting solutions, SML has ensured that this capability remains firmly on Indian soil. We are proud to provide the infrastructure lifting solutions that allow our partners to build bigger, faster, and more safely than ever before."

Technical Precision for Complex Deployments

The current 1600 MT crane deployment cycles across various national sites underscore the machine's versatility and the technical expertise of the SML team. These operations are essential for sectors such as oil and gas, refineries, and renewable energy, where singular components often weigh hundreds of metric tonnes and must be positioned with millimeter precision. The crane's modular design and advanced load-monitoring systems allow it to operate in the high-density environments typical of modern refinery expansions and power plant upgrades.

Integrated Logistics and Technical Excellence

A deployment of this magnitude is supported by Sanghvi Movers' specialized in-house ecosystem, ensuring EPC project crane support that is both reliable and cost-effective:

- **Capacity:** 1,600 Metric Tonnes (MT) for static and rotary equipment lifting.
- **Logistics:** Utilization of hydraulic axle lines and high-bed trailers for seamless mobilization from strategic depots to job sites.
- **Safety:** Zero-incident execution protocols, backed by SML's Integrated Management System (ISO 9001:2015, ISO 14001:2015, and ISO 45001:2018) for QHSE standards.

"This ongoing success is a testament to our 'ELEVATE 2030' vision," added Rishi C. Sanghvi. "By leveraging our advanced high-capacity crawler cranes, we are not just renting equipment; we are enabling the rapid development of India's core infrastructure. Our goal is to provide a single-window execution framework that reduces project timelines and enhances safety across the board."

Strengthening India's Infrastructure Landscape

As the Indian construction market continues its robust growth trajectory through 2028, Sanghvi Movers is strategically positioned to meet increasing demands. The company's investment in global-scale assets like the 1,600 MT crane, combined with strategic initiatives like the MoU with Action Construction Equipment (ACE) for indigenous heavy cranes, underscores a deep commitment to the *Aatmanirbhar Bharat* (Self-Reliant India) initiative.

By providing the lifting power necessary for India's transition to green hydrogen, expanded refinery capacities, and large-scale renewable energy farms, Sanghvi Movers remains the backbone of the nation's industrial evolution.

About Sanghvi Movers Limited

Sanghvi Movers Limited (SML) is the largest crane rental company in India and Asia, and the 5th largest

globally. Headquartered in Pune, Maharashtra, the company was incorporated in 1989 and is listed on both the Bombay Stock Exchange (BSE) and the National Stock Exchange (NSE). SML specializes in providing hydraulic and crawler cranes to various industries, including Wind Energy, Power, Steel, Cement, Refineries, and Metro Railways. With a fleet of 450+ cranes and a depot network across the country, SML is the preferred partner for heavy lifting and project logistics in the region.
