

Standard Data Partners with Triple Plus to Deliver Institutional-Grade Collateral Verification for Global SME Finance

Blockchain Trade Finance Leader, Triple Plus, to Integrate Standard Data's Veracity Middleware, Slashing SME Loan Processing Times by 80%.

Dubai, United Arab Emirates Mar 12, 2026 ([IssueWire.com](https://www.issuewire.com)) - [Standard Data](https://www.standarddata.com), the global leader in RWA Veracity Middleware and Decentralized Oracle Networks, today announced a strategic partnership with [Triple Plus Global](https://www.tripleplus.com), a premier blockchain-based platform automating trade financing for small-to-medium enterprises (SMEs). This integration establishes a new industry standard for high-integrity, automated private debt.

Small businesses globally face a \$1.7 trillion financing gap, primarily due to banks' lengthy manual verification of off-chain documents like receivables and invoices. Triple Plus simplifies this by connecting SMEs directly to on-chain liquidity pools. To eliminate the risk of fraud and over-collateralization, Triple Plus will now consume Standard Data's core service: The **Standard Data Attestation (SDA)**.

Standard Data's oracle network aggregates authoritative data from independent sources—including port authorities, government registries, and certified IoT sensors—using a decentralized consensus model. The resulting SDA provides Triple Plus' smart contracts with non-manipulatable, cryptographic proof that a physical asset (such as a container shipment) exists and is in the stated condition.

“Our mission is the institutionalization of private debt. The 'Reality Gap'—the inability to trust physical data without manual audits—has been the single largest hurdle for DeFi private credit,” said Raju Varghese, Co-Founder of Standard Data. “By partnering with Triple Plus, we are moving beyond proof-of-concept. Standard Data is providing the infrastructure of evidence that allows capital to flow to productive businesses without friction.”

Shane Anh Perkins, CEO of Triple Plus, added, “Trusting a single API or a PDF upload for a \$500,000 SME loan is outdated. Standard Data's 'Consensus Aggregation' model gives our liquidity providers unprecedented certainty. Automated verification means we can move from invoice submission to loan distribution in minutes, not weeks, providing SMEs with the critical working capital they need.”

The partnership activation begins today with logistical verification feeds for Triple Plus' agriculture and consumer electronics lending verticals. Full compliance and identity verification (KYB) adapters are scheduled for integration in Q3 2026.

About Standard Data

Standard Data is the decentralized middleware for real-world asset veracity. We bridge off-chain authority—government registries, port authorities, and industrial IoT—with on-chain liquidity, translating physical events into cryptographically signed data. Our Decentralized Oracle Network is the trusted eye for the global RWA ecosystem. *Standard Data. The Infrastructure of Evidence.*

About Triple Plus

Triple Plus is a blockchain-native trade finance platform connecting global SMEs with on-chain liquidity pools. By automating the entire financing lifecycle—from application to settlement—Triple Plus removes

legacy banking inefficiencies, providing businesses with instant, asset-backed working capital based on verified receivables and LOI. *Triple Plus. Trade Finance, Automated.*
