

Timeless Resources Launches First Regulated Silver RWA in Hong Kong, Pioneering Tokenized Precious Metals Investment

TIMELESS RESOURCES HOLDINGS LIMITED

天時資源控股有限公司

(incorporated in Hong Kong with limited liability)

(Stock Code: 8028)

Hong Kong, Hong Kong S.A.R. Mar 25, 2026 ([IssueWire.com](https://www.IssueWire.com)) - Timeless Resources Holdings Limited (the “Company”, stock code: 8028), a listed company on GEM of The Stock Exchange of Hong Kong Limited (the “Stock Exchange”), is pleased to announce the official launch of silver tokens that are one-to-one backed by physical silver assets (the “Silver Tokens”), representing the first regulated tokenized Silver Real World Asset (RWA) project in Hong Kong. This groundbreaking project represents a significant milestone in the integration of traditional precious metals investment with blockchain technology, offering professional investors an efficient, transparent, secure, and accessible pathway to participate in the silver market.

The Silver Tokens project is launched by Silver Times Limited, a subsidiary of the Company, and it supplies the underlying physical assets, with the mission of transforming physical silver assets into tokenized digital assets with stability and institutional-grade infrastructure. By leveraging cutting-edge blockchain technology and partnering with industry-leading institutions, the Company aims to democratize access to silver investment while maintaining the highest standards of regulatory compliance and asset integrity.

Revolutionizing Silver Investment through Tokenization

The Silver Tokens enable professional investors to own fractional interests in physical silver, with each token backed one-to-one by one troy ounce of .9999 fine physical silver stored in secured vaults operated by a reputable independent third party service provider. This tokenization approach addresses long-standing barriers to precious metals investment, including high storage costs and complex transfer mechanisms. Professional investors can now acquire, hold, and invest in silver with the same ease as

traditional financial assets, while benefiting from the intrinsic value that silver has historically provided in hedging against market volatility and inflation.

The Silver Tokens are issued on HashKey Chain, an Ethereum Layer 2 solution that offers robust smart contract functionality, low transaction costs, and compatibility with the broader Ethereum ecosystem. This technical infrastructure ensures that all transactions are efficient, secure, and verifiable on-chain, while maintaining full compliance with applicable regulations in Hong Kong. To ensure the physical integrity and security of the underlying silver assets, the physical silver assets are stored in vaults operated by an internationally-recognized institutional-grade vault. The legal rights relating to physical silver are held on trust by a trustee that is a registered trust company with Trust or Company Service Provider licence, providing professional investors with an additional layer of institutional protection and regulatory oversight.

Strategic Partnerships Driving Innovation

This project was made possible through strategic collaboration with distinguished partners who bring expertise, credibility, and operational excellence to the platform. HashKey Group, a leading blockchain technology group, provides blockchain infrastructure and technical support on the smart contracts development. Eddid Securities and Futures Limited (“Eddid Securities”), an uplift SFC Type 1 licensed corporation engaged in virtual asset trading and product distribution services, acts as the project coordinator and offers placement capabilities and market access, enabling the Company to reach a broad base of professional investors.

Exceptional Market Opportunity Underpins Strategic Vision

The launch of Silver Tokens arrives at a pivotal moment in the global silver market. According to the Silver Institute, the silver market is on course for its sixth successive year of structural deficit, with market balance falling well below exchange-traded product levels. The projected structural supply-demand imbalance has widened significantly to 67 million ounces in 2026. This sustained deficit, driven by rapidly growing industrial applications and stagnated supply growth, creates a compelling investment case for silver as a strategic asset class.

Several transformative technological trends are accelerating silver demand to unprecedented levels. The rapid expansion of artificial intelligence infrastructure requires substantial utilization of silver for chip manufacturing and advanced electronics, while the global energy transition drives massive demand for silver in solar photovoltaic systems. Electric vehicle production, which requires significantly more silver than traditional automobiles, continues to scale up globally. These structural demand drivers, are unmatched by shortfall in supply, positioning silver as a uniquely attractive asset in the current macroeconomic environment.

Statement from Leadership

Ronald Tan, Chief Executive Officer of the Company, commented: "We are thrilled to announce the launch of Silver Tokens, representing Hong Kong's first regulated silver RWA. This project reflects our commitment to innovation and our belief in the transformative potential of blockchain technology to democratize traditional investment products. Silver presents a compelling investment opportunity driven by structural deficits and growing industrial demand. We are proud to offer professional investors an efficient secure, transparent, and accessible way to participate in this market. Our partnership with HashKey and Eddid Securities ensures that we deliver institutional-grade infrastructure and regulatory compliance to our professional investors."

Leo Li, Chief Executive Officer of HashKey, commented: "The Silver Tokens are traditional RWA cases. In addition to technical support, HashKey CaaS also implemented the overall on-chain solution at the infrastructure level. With a growing number of assets being recorded on-chain through standardized infrastructure, we believe that the integration of traditional finance with blockchain will be accelerated, constituting an important milestone for HashKey's commitment to the development of infrastructure for on-chain finance."

About Timeless Resources Holdings Limited

Timeless Resources Holdings Limited is a diversified software and mining company listed on GEM of the Stock Exchange (stock code: 8028). The Company is committed to exploring innovative opportunities in the digital asset industry, with a focus on bridging traditional business with blockchain technology.
