

Trade Diversified Responds to 2026 Shift Toward Metal as a Primary Architectural Element

As designers and builders embrace metal as a primary architectural element, Trade Diversified provides the components and expertise to execute the vision

Ontario, California Mar 26, 2026 ([Issuewire.com](https://www.issuewire.com)) - As 2026 design reporting points to tactile metalwork and intentional mixed finishes as defining interior directions, Trade Diversified (TDI Brass) is seeing a shift in how brass and stainless steel are specified. Designers and builders are increasingly using metal not as an accent, but as a primary architectural element, creating demand for coordinated

components, finish consistency, and technical support.

Recent coverage from [Vogue](#) and [Good Housekeeping](#) highlights the growing emphasis on mixed-metal installations and structural metal details in residential and commercial environments. This direction aligns directly with the needs of builders and fabricators specifying brass and stainless systems that must perform visually and structurally.

For nearly four decades, Trade Diversified has supplied precision-cut tubing and architectural components that support this evolution. From bar foot rails and shelving systems to stair railings and partition installations, the company provides the material foundation for metal-forward design.

“Bold metal design lives or dies on the details,” said Erica Huang, Project Support Manager at Trade Diversified. “If the components don’t work together, the vision falls apart. We provide the coordinated component system—the quality, finish consistency, and expert support. And when a project demands something beyond the standard, our fabrication experience allows us to support it.”

Comprehensive Architectural Metal Components

Trade Diversified maintains a large in-stock selection of premium brass and stainless steel tubing, brackets, railing systems, and fittings.

- Brushed Brass
- Polished Brass
- Polished Stainless Steel
- Chrome
- Matte Black
- Oil Rubbed Bronze
- Over 25 powder-coated color options

Configuration Support and Custom Fabrication

Beyond inventory, Trade Diversified provides configuration guidance to help clients select the correct components for applications such as bar foot rails, stair railings, shelving systems, and partition installations.

For projects extending beyond standard configurations, custom fabrication services support specific sizing, finish requirements, and unique design parameters.

About Trade Diversified (TDI Brass)

Founded in 1987 and headquartered in Ontario, California, Trade Diversified supplies decorative and architectural metal hardware. The company specializes in premium brass and stainless steel tubing, railing systems, and specialty components for commercial and residential applications.

By combining extensive inventory with configuration support and fabrication expertise, Trade Diversified enables builders, designers, and fabricators to build something beautiful.
