VoidChain Joins SIAM FRONTIER CAPITAL EXPO as Special Support Partner

Ararat, Armenia Mar 23, 2026 (Issuewire.com**)** - The upcoming SIAM FRONTIER CAPITAL EXPO, set to take place at IMPACT Challenger in Bangkok, Thailand, has welcomed a major partner. Next-generation blockchain infrastructure project VoidChain has officially confirmed its deep participation as a Special Support Unit in the summit. Together with global institutions such as the Thailand Blockchain Association (BEST) and Feixiaohao.ai, VoidChain will help facilitate precise connections between international capital and cutting-edge technologies.

Next-Generation Blockchain Architecture: Vacuum Isolation and AI-Driven Security Innovation

VoidChain is positioned as an "infinitely scalable and absolutely isolated modular vacuum blockchain," powered by three core technical modules:

· AI Decentralized Bots: These bots enable autonomous programming and verification, rigorously validating each other's system fingerprint characteristics to ensure mutual trustworthiness, significantly enhancing system security.
· Vacuum-Isolated Meta-Space: This creates a physically isolated operating environment for different applications or sovereign chains, ensuring that a single fault does not spread. It provides an absolutely secure runtime environment for mission-critical tasks such as finance and government services.
· Trust Proof Consensus: By introducing a trust scoring mechanism on top of decentralization, consensus efficiency is optimized, achieving ultra-high throughput and low-latency transaction processing.

This architecture provides an ideal underlying support for sovereign blockchains, AI-integrated infrastructure, and high-security application scenarios. At the summit, the founder of VoidChain will publicly disclose the core technical security details, expected to spark deep consideration and discussion within the internet and IoT security industries.

Bangkok Summit: An International Platform Connecting Capital and the Future

SIAM FRONTIER CAPITAL EXPO is strategically located in Bangkok, a hub for Southeast Asia's blockchain sector. It aims to leverage the region's digital economy advantages to create a premier summit connecting global capital with high-quality projects. Under the theme "Connecting Capital · Connecting the Future," the event is expected to attract over 2,000 industry professionals, more than 500 investment institutions, and hundreds of media outlets from around the world, covering the entire spectrum of public chains, DeFi, AI+Web3, and more.

As a Special Support Partner, VoidChain will fully participate in keynote speeches, panel discussions, and dedicated capital matchmaking sessions. Its founder will elaborate on "How Vacuum Blockchain Reconstructs Digital Infrastructure" and engage with institutions like BEST and Feixiaohao.ai to explore opportunities and challenges in the Southeast Asian Web3 market. Additionally, early-stage projects within the VoidChain ecosystem will appear in pitch sessions for in-depth exchanges with investment institutions.

Ecosystem Synergy: Tripartite Collaboration Building an Empowering Closed Loop

This partnership deepens the long-term strategic collaboration between VoidChain, Asia's leading data platform Feixiaohao.ai, and Thailand's authoritative blockchain association, BEST. The "Fly with Feixiaohao" initiative, launched by Feixiaohao.ai, is dedicated to helping high-quality projects reach the international stage through one-stop services including media exposure, capital introductions, and compliance guidance. VoidChain's participation provides a high-performance, high-security on-chain deployment environment for projects within the initiative. Simultaneously, Feixiaohao.ai's user and institutional networks bring a continuously growing developer community to VoidChain. BEST offers localized support in areas such as compliance consulting and government relations. The three parties jointly form a complete enabling loop integrating technology, capital, and policy.

Outlook: Setting Sail from Bangkok, Linking Global Value

As the summit approaches, the VoidChain team has arrived in Bangkok to begin preparations. A team representative stated: "Southeast Asia is one of the most vibrant regions for Web3 innovation globally. The Bangkok summit is a crucial step for showcasing our technological strength and expanding our global footprint. Moving forward, VoidChain will continue to adhere to its modular, isolatable, and high-performance technical roadmap, working with global partners to promote the penetration of blockchain into the real economy and governance sectors."

On March 29, 2026, at IMPACT Challenger in Bangkok, a dialogue about capital and the future is set to commence. VoidChain, together with all its ecosystem partners, will use technology as the oar and capital as the sail, navigating towards the next decade of Web3.

About VoidChain
VoidChain is an infinitely scalable and absolutely isolated modular vacuum blockchain, driven by AI-managed security, vacuum-isolated meta-space, and Trust Proof Consensus. It is dedicated to providing secure and efficient underlying support for sovereign blockchains, AI-integrated infrastructure,

and mission-critical systems.

About SIAM FRONTIER CAPITAL EXPO
Initiated by Feixiaohao.ai and co-organized with institutions such as the Thailand Blockchain Association (BEST), SIAM FRONTIER CAPITAL EXPO aims to create a high-end summit connecting international capital with quality Web3 projects, promoting industrial innovation and long-term value development.
