

## Otrace Launches Instant Private Cryptocurrency Exchange Service

**Alabaster, Alabama Apr 13, 2026 ([IssueWire.com](https://www.issuewire.com))** - Otrace today launches an instant private cryptocurrency exchange service designed for fast, clear, and discreet asset execution — supporting both crypto-to-crypto and crypto-fiat flows.

The platform enables users to send assets, define a destination, and receive a payout without account

creation or registration. Built with privacy at its core, Otrace operates with no logs, no tracking, and no unnecessary data retention.

Execution follows a flexible model: direct settlement when possible, routed liquidity when needed. Orders are handled depending on the asset, network, market path or fiat pair. Different execution paths, one private outcome: send assets (crypto or fiat), receive payout, leave no unnecessary data behind.

The service is built for swaps, conversions, and payout flows with minimal friction. It focuses on discreet, low-friction execution while maintaining transparent and fast settlement.

Otrace is currently in early access. Execution paths, network coverage, exchange scenarios and fiat support are actively expanding. During this phase, a temporary exchange limit of up to \$10,000 applies per transaction.

“We believe digital asset exchange should feel private, clear, and immediate — whether moving between cryptocurrencies or between crypto and fiat,” said the Otrace team. “Otrace is built to make discreet, low-friction execution the standard. This is how instant exchange should work. Private by design.”

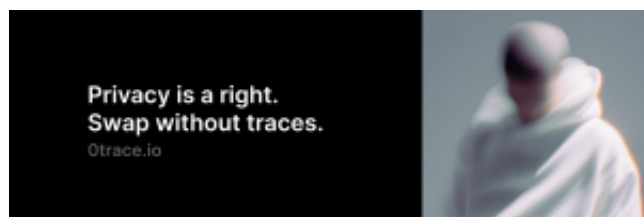

### **About Otrace**

Otrace is an instant private cryptocurrency exchange service. Send assets, define destination, receive payout — no account required. Built for fast cross-network and crypto-fiat exchange with no logs, no tracking, and no unnecessary data retention. Private by design.
