

1Source Rentals Announces Strategic Move to New Aurora Facility to Boost Climate Control Services in Colorado

New Central Hub in Aurora Enhances Access and Response Times, Extending 1Source Rentals' Commitment to Cutting-Edge Climate Solutions Across Denver Metro and Front Range.

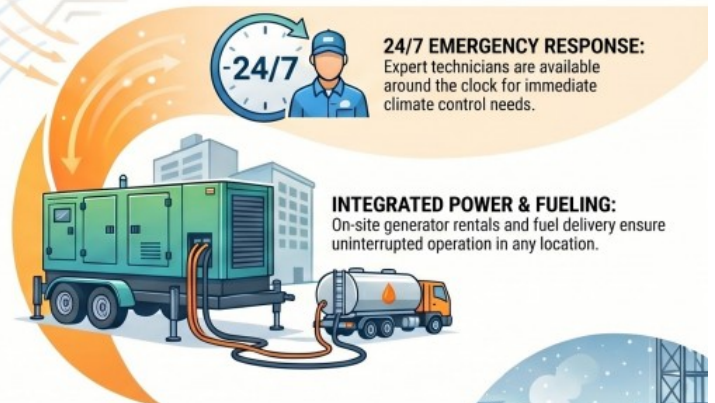

The Ultimate Guide to Temporary Climate Control Solutions

Specialized portable HVAC and power solutions by 1Source Rentals for commercial and industrial applications.

SPECIALIZED COOLING EQUIPMENT

COMPREHENSIVE SITE SUPPORT

SPOT COOLERS
1 TO 1.5 TONS
Server rooms and small offices

HIGH-CAPACITY UNITS
12 TONS
Large industrial facilities with forklift access

HORIZONTAL UNITS
UP TO 25 TONS
Central HVAC maintenance or total system breakdowns

GROUND THAW SOLUTIONS:
Specialized equipment to keep construction moving and concrete curing during sub-zero temperatures.

Denver, Colorado Apr 23, 2026 ([IssueWire.com](https://www.issuewire.com)) - 1Source Rentals today announced the grand relocation of its operations to a strategically centralized facility at 2022 Helena St., Aurora, CO, enhancing its service capabilities throughout the Denver Metro and Front Range. This move underscores the company's commitment to providing rapid, localized support for temporary climate control solutions essential to maintaining operational continuity across diverse industries in Colorado's unique high-altitude environments.

1Source Rentals, renowned for its specialization in comprehensive HVAC solutions, strategically positions its new Aurora hub to address the evolving climate control needs of commercial, industrial, and construction sectors. This relocation facilitates enhanced service, offering faster access to a wide range of cooling, heating, and air management equipment. Notably, the facility will stock advanced units such as Koldwave water-cooled systems and 25-ton horizontal units, allowing clients to maintain productivity and capital efficiency in Colorado's demanding and variable climate conditions.

The upgrade to a centralized Aurora location aligns with the "Full Stack" approach of 1Source Rentals, which integrates temporary power, continuous fuel delivery, and climate control hardware to ensure operational resilience. In high-altitude regions like Colorado, where traditional air-cooled HVAC systems often fall short due to reduced air density, the company's advanced engineering solutions circumvent these limitations, maintaining project timelines and budget stability.

"We are thrilled about our strategic move to Aurora," said Kevin Thomas, a Colorado Sales representative at 1Source Rentals. "This relocation underscores our commitment to staying close to our clients. By enhancing our logistics capabilities, we provide faster, more efficient responses to the critical climate control needs prevalent in our region, ensuring our clients can continue operations without interruption."

1 Source Rentals' long-term vision is to transform climate control from a reactive utility to a proactive, integrated infrastructure layer that safeguards project budgets and productivity. Their comprehensive service offerings cover not only [immediate cooling](#) or heating needs but extend to integrated power solutions—demonstrating alignment with their mission to deliver high-quality, reliable equipment that meets customer demands swiftly and effectively.

The technical prowess of 1 Source Rentals is evident in its portfolio of equipment, including innovative water-cooled and evaporative cooling solutions that deliver significant temperature reductions necessary for maintaining productivity in open-air and industrial environments. Their advanced units feature cutting-edge self-diagnostic capabilities and user-friendly design to ensure reliable performance is sustained without manual intervention, thus minimizing downtime and maintenance costs in critical operational scenarios.

"Our new facility not only enhances our service delivery but also emphasizes our role as a strategic partner in climate management," said Thomas. "With our expanded reach, we bring vital infrastructure within arm's reach of our clients, bolstering their capacity to navigate environmental and operational challenges effectively."

In summary, the relocation of 1Source Rentals' operations to Aurora is a pivotal step in enhancing service efficiency and technical support for high-stakes environments where climate control is critical.
