

# Avenir Releases New Wave of AI Agents for Sourcing and Contract Management on ServiceNow

New agents for RFX response bid scoring, award recommendation, and post-award obligation management deliver autonomous AI execution for enterprise procurement and contract teams.

**McKinney, Texas May 5, 2026 ([Issuewire.com](http://Issuewire.com))** - Avenir, a trusted provider of AI-powered contract lifecycle management (CLM) and procurement software, today announced the next wave of AI agents that will power two critical processes: strategic sourcing (RFP Management) and post-signature obligation management. The latest agents help procurement and contract teams speed up sourcing cycles, make faster award decisions, and stay in control of every contractual commitment.

The announcement builds on Avenir's rapidly growing portfolio of AI agents for contract review, summarization, digitization, obligation identification, and compliance screening – enabling enterprises to automate high-effort tasks across the vendor and contract lifecycle.

## Smarter Sourcing, Faster Decisions

Evaluating supplier bids manually is slow, inconsistent, and costly. With the new wave of AI agents, Avenir's procurement customers can now automatically score RFX responses and generate transparent, data-backed rationale – eliminating days of manual work. Award Recommendation Agents surface the top suppliers with AI-generated summaries, so sourcing leaders move from evaluation to automated shortlist and award with speed and confidence.

The new launch integrates agents into Aavenir RFPflow and ServiceNow Source-to-Pay Operations (SPO) for a seamless user experience. It also introduces Excel-like pricing grids and automated savings benchmarking to help sourcing managers handle complex, multi-tier pricing structure bids and compare incoming bids against historical pricing and previous RFX rounds, giving procurement teams a clear view of realized savings.

*“Sourcing teams at our customers must balance hundreds of supplier responses with the need to maximize savings and find the right strategic partners. By deploying AI agents within Aavenir RFPflow, we’re delivering tangible cost savings and empowering procurement teams to focus on high-value supplier relationships while AI automates the heavy lifting of shortlisting, scoring, and RFX award management,”* **said Jesal Mehta, Founder and CEO, Aavenir.**

## Obligation Management, Under Greater Control

Procurement, legal, and compliance teams have long struggled with obligations buried across complex documents. Aavenir’s obligation-focused agents now handle this end-to-end – extracting, de-duplicating, and classifying every commitment, generating servicing instructions, and validating closure documents against obligation requirements.

With the next generation of AI agents powering Aavenir Contractflow, customers can achieve unprecedented time and cost savings by managing vendor and customer obligations by exception. This allows procurement, legal, IT, and compliance teams to prioritize strategic relationships while AI autonomously identifies, tracks, and fulfills obligations to timely closure.

*“Our mission is to eliminate manual friction that has traditionally slowed down Source-to-Pay and contract management. By moving beyond simple automation to autonomous AI agents, we are giving procurement and legal leaders the ability to manage complex bids and thousands of contractual obligations by exception. This doesn’t just save time - it fundamentally changes how enterprises manage risk and capture realized savings at scale,”* added **Sunil Masand, SVP Product, Aavenir.**

## Key Impact and Outcomes

- **80%** faster sourcing cycles
- **32%** sourcing cost savings
- **10x** improvement in post-award obligation management efficiency and effectiveness
- **72%** reduction in non-compliance and non-performance risk
- **Millions** saved with effective contract obligation management

## About Aavenir

Aavenir is an Elite ServiceNow Partner that delivers a comprehensive suite of AI-powered solutions, including CLM, Strategic Sourcing, Vendor Onboarding, Obligation Management, and AP Automation. Built natively on the ServiceNow platform, Aavenir’s applications empower both ServiceNow and non-ServiceNow organizations to achieve 80% faster cycle times, a 72% reduction in risk, and 100% visibility across the entire Source-to-Pay and contract lifecycle.

Avenir is SOC 2 Type II and ISO 27001:2022 certified and serves a diverse range of highly regulated sectors, including healthcare and life sciences, financial services, insurance, manufacturing, education, and the public sector.
