

Chiron Stud to Develop Premium Thoroughbred Breeding Facility in Queensland

Cairns, Queensland Apr 23, 2026 ([IssueWire.com](https://www.issuewire.com)) - Chiron Stud has announced plans to develop a premium thoroughbred breeding, spelling, and agistment operation in South East Queensland, Australia.

The project is designed as a vertically integrated equine facility, combining breeding, agistment, and support services into a single operation. This model is intended to improve efficiency, reduce fragmentation in the market, and provide consistent, high-quality services to horse owners, trainers, and industry participants.

The facility will be strategically located near key racing regions, addressing increasing demand for professionally managed equine services in Queensland.

Chiron Stud has already secured six client Letters of Intent between February and April 2026, demonstrating strong early demand prior to launch.

The initial development phase is targeted for Q4 2026, subject to funding and final approvals.

The business is currently progressing through investor outreach and capital raising to support land acquisition, infrastructure development, and operational setup.

Chiron Stud aims to establish itself as a premium, scalable equine services platform with potential for future expansion.

This project is being supported through the EquityPilot program by FasterCapital, assisting with investor readiness and outreach.
