

City Orthodontics Introduces Standardized Treatment Planning Protocols to Support Consistent Patient Care

Dr. Saleh Al Daghreer

Edmonton, Alberta May 28, 2026 ([Issuewire.com](https://www.issuewire.com)) - City Orthodontics, led by [Dr. Saleh Al Daghreer](#), announced the implementation of standardized treatment planning protocols designed to support consistency in orthodontic care across a wide range of patient cases.

The protocols introduce defined steps for diagnosis, case evaluation, and treatment sequencing, ensuring that each patient's treatment plan follows a structured clinical framework. The initiative reflects the clinic's focus on maintaining uniform care standards within a regulated healthcare environment.

Orthodontic treatment planning involves multiple variables, including tooth alignment, bite relationships, and long-term stability. Differences in planning approaches can lead to variation in how treatment is delivered.

City Orthodontics stated that the standardized protocols establish clear guidelines for reviewing diagnostic records and outlining treatment pathways before care begins. Each case is assessed using consistent criteria to support clarity and predictability in planning.

The clinic has also integrated internal review steps to ensure that treatment plans remain aligned with established protocols. These reviews are designed to reduce variation and support consistent decision-making across cases.

Healthcare quality frameworks often emphasize the importance of standardized processes in improving consistency and reducing variability in patient care. By formalizing treatment planning protocols, City Orthodontics aims to reinforce structured orthodontic care delivery across all treatment stages.

Dr. Saleh Al Daghreer said,

“Consistency in treatment planning is important for both patients and clinical teams. A structured approach helps ensure that each case is evaluated carefully and that treatment follows a clear path from the beginning.”

[City Orthodontics & Pediatric Dentistry](#) continues to operate within provincial regulatory frameworks and maintains established clinical and documentation processes. The standardized planning protocols represent an additional internal measure designed to support reliable and consistent orthodontic care.

About City Orthodontics

City Orthodontics is an orthodontic practice based in Edmonton, Alberta, providing orthodontic care to children, adolescents, and adults. Led by Dr. Saleh Al Daghreer, the clinic focuses on structured treatment planning, patient communication, and consistent care delivery within a regulated healthcare environment.
