

# CorpusIQ Launches Enterprise Multi-Source MCP Server on Azure and AWS Marketplaces

CASA-certified AI data bridge connects 50+ business tools to enterprise AI platforms through a single integration

**Scottsdale, Arizona Apr 3, 2026 ([IssueWire.com](https://www.issuewire.com))** - CorpusIQ, a multi-source Model Context Protocol (MCP) server platform, today announced its enterprise expansion with upcoming availability on both Microsoft Azure Marketplace and AWS Marketplace within 60 days. The listings will give enterprise procurement teams a streamlined path to deploy CorpusIQ through existing cloud agreements and billing infrastructure.

CorpusIQ connects over 50 business data sources, including QuickBooks, Shopify, HubSpot, Google Analytics 4, Salesforce, Slack, and dozens more, into AI platforms like Anthropic Claude and OpenAI ChatGPT through a single MCP server integration. Rather than building and maintaining individual API connections, enterprises get unified, permissioned access to operational data across finance, marketing, sales, ecommerce, and communications.

The platform holds DEKRA CASA Tier 2 security certification and Google Cloud OAuth verification, meeting the compliance bar enterprise buyers require before connecting production business systems to AI assistants.

"Enterprise teams don't need another AI tool. They need their existing tools to actually talk to their AI platforms," said Benoit Larroque, Founder of CorpusIQ. "That's what we built. One integration, 50 connectors, zero custom development."

The Azure Marketplace listing is being deployed through a partnership with Tackle.io, CorpusIQ's marketplace integration partner. AWS Marketplace will follow. Both listings will support standard enterprise procurement workflows including consolidated billing, private offers, and existing cloud commit spend-down.

Key enterprise capabilities include OAuth-based connector management across all 50+ integrations, cross-source data correlation for financial reconciliation and operational auditing, role-based access controls, and SOC 2-aligned data handling practices.

CorpusIQ serves companies in SaaS, ecommerce, real estate operations, manufacturing, and professional services who need their AI assistants to work with real business data rather than generic training sets.
