

Holy Micro! LLC Challenges Aviation Stigma: Precision Tech Now More Accessible with Massive Sun 'n Fun Discounts

Syracuse, New York Apr 8, 2026 (Issuewire.com) - As pilots gather for the Sun 'n Fun Aerospace Expo, **Holy Micro! LLC** is taking a stand against the traditional aviation stigma that cockpit safety aids are a "crutch." Instead, the company is proving that its suite of height announcers and Angle-of-Attack (AoA) systems actually accelerate pilot proficiency by providing real-time, multisensory calibration. Attendees can see these innovations firsthand at **Hangar B, Booth B-27 & 28**.

The Science of Better Flying

Many in the pilot community have long felt that relying on AGL height announcers or AoA indicators might lead to skill decay. Holy Micro! Founder Frank Kunnumpurath argues the exact opposite: these tools function as a high-fidelity training environment during every single landing.

"Think of it as high-fidelity training for your brain," said **Kunnumpurath**. "By using these systems, you aren't just listening to a number; your mind automatically begins to associate the visual sight picture out the window with the precise height announcement in your ear. Over time, this constant reinforcement makes you a better, more instinctual pilot. You aren't replacing your judgment—you are calibrating it."

Elevating the Standard: Absolute AoA

While traditional AoA systems rely on "old school" pressure difference—a method often plagued by unreliability and lag—Holy Micro! is introducing **Absolute AoA**. This advanced **multi-sensor** system utilizes **pressure ratio** calculations to deliver a higher level of accuracy. By analyzing the ratio rather than simple raw differences, the system remains stable and dependable across all flight regimes, providing pilots with a true "reserve of lift" indicator they can trust during critical phases of flight.

A Specialized Solution for Every Mission

Holy Micro! offers a specialized lineup designed to stack the odds in the pilot's favor:

- **SkyVoice Alert 500 (Land Aircraft):** A standalone "digital co-pilot" providing critical AGL callouts to prevent gear-up landings and runway excursions.
- **SkyVoice Glassy Guide 400 (Seaplanes):** Specifically engineered for the unique challenges of water landings, where depth perception can be dangerously deceptive during "glassy water" conditions.
- **Absolute AoA (All Aircraft):** The new standard in lift monitoring, utilizing multi-sensor pressure ratio technology for unwavering precision.

[Breaking the "Brand Tax" with Massive Savings](#)

Beyond the technical advantages, Holy Micro! is dismantling the "Brand Tax" that often prices safety out of reach. While competing systems can see total costs exceed **\$10,000** once proprietary glass cockpits and hardware are factored in, Holy Micro! is offering a path to professional-grade safety for a fraction of the cost.

To celebrate Sun 'n Fun, Holy Micro! is offering a **massive \$1,200 discount** on the **SkyVoice + Absolute AoA combo purchase** at their booth. Individually, the SkyVoice Alert 500 is being offered at a show special of just **\$1,300**.

"You shouldn't have to spend \$10,000 on a panel upgrade just to hear how high you are," Kunnumpurath added. "SkyVoice works with any headset, any intercom, and any airplane—from a vintage Cub to a modern amphibian. Visit us at **Hangar B, Booth B-27 & 28** to see it in action."

[About Holy Micro! LLC](#)

Based on the personal flight experiences of its founder, **Holy Micro! LLC** specializes in FAA-approved (NORSEE) safety equipment. By integrating advanced sensors and voice-annunciated data, Holy

Micro! helps pilots fly safer, more consistent approaches while maintaining the highest levels of situational awareness.
