

Kapri Core Solution Announces Launch of New Corporate Website Highlighting Advanced Motor Stamping Capabilities

The premier Faridabad-based manufacturer unveils its newly upgraded digital platform to streamline the supply chain for OEMs in the home appliance and industrial machinery sectors.

Faridabad, Haryana Apr 8, 2026 ([Issuewire.com](https://www.issuewire.com)) - Kapri Core Solution Pvt. Ltd., a leading manufacturer of precision electrical motor components, today announced the official launch of its newly revamped corporate website. The upgraded digital platform is designed to provide Original Equipment Manufacturers (OEMs) across India and global markets with streamlined access to the company's high-volume manufacturing capabilities and engineering services.

The newly launched website specifically highlights Kapri Core Solution's core competencies in progressive die stamping, high-tonnage press operations, and the production of precision electrical motor stators and rotors. Tailored heavily toward procurement managers in the home appliance, HVAC, and industrial machinery sectors, the platform offers a transparent look into the company's manufacturing infrastructure.

A major focal point of the new digital presence is the company's fully integrated in-house tool room. By handling precision die design, tool manufacturing, and ongoing die maintenance internally, Kapri Core Solution effectively eliminates the third-party delays that frequently disrupt industrial supply chains.

"Our new website is a direct reflection of our operational philosophy: QDS—Quality, Delivery, and Service," stated a spokesperson for Kapri Core Solution Pvt. Ltd. "We wanted our digital presence to clearly communicate to OEMs that when they partner with us, they are securing a reliable, scalable supply chain capable of strict dimensional accuracy and consistent batch-to-batch quality."

Visitors to the new site can explore detailed information regarding the company's specific component manufacturing, review technical service offerings, and directly submit technical drawings for rapid, custom quotes.
