

Kenyan Data Scientist Launches PredictLix - a Free AI Football Predictions Platform

The new platform gives every football fan worldwide access to professional-grade match analysis at zero cost

Kisumu, Nyanza Apr 28, 2026 ([IssueWire.com](https://www.IssueWire.com)) - With the football World Cup coming, a Kenyan data scientist launches a brand-new free AI football predictions platform, [PredictLix](#). The platform is built on machine learning and real-time sports data, and has recently launched to give fans and bettors worldwide access to daily AI-driven match analysis at no cost. As interest in data-driven football analysis continues to grow, most professional-grade prediction tools remain behind paywalls or require registration. This is where the free football predictions platform comes in, addressing this gap by offering full access to all features without subscriptions or sign-ups.

At its core, PredictLix applies machine learning models to generate daily match predictions, drawing on more than twenty statistical indicators per fixture. These include team form, historical head-to-head results, home versus away performance metrics, and real-time bookmaker data. The result is a prediction accompanied by a Confidence Score, which is a percentage that reflects how strongly the data supports a given outcome. With the way it is built, PredictLix is a platform that is meant for common users, lovers of the game, not just experts.

What makes PredictLix different from its existing competitors in the industry is its dire commitment to accessibility. To use the platform and make a prediction, users do not need to register. Moreover, every feature on the platform is available at no cost, so users do not need to spend a dime at any point. Whether a casual football fan in Nairobi or a seasoned bettor in Karachi, users worldwide can access the same depth of analysis typically reserved for professional tipsters. In addition to that, the platform spans competitions across all major regions, covering European top flights such as the Premier League,

La Liga, Bundesliga, and Serie A, alongside continental tournaments including the UEFA Champions League. African football is also well represented, with fixtures from the FKF Premier League in Kenya, Ligi Kuu Bara in Tanzania, and Nigeria's NPFL included in the daily coverage.

"I built PredictLix because quality football analytics should not be a privilege," said [Timothy Omolo](#), Founder and CEO. "Every fan deserves access to honest, data-backed predictions — regardless of where they live or what they can afford."

There are 6 types of ways to predict a match on the platform, which gives users flexibility in how they engage with the data. They are 1X2 — Home win, draw, or away win, Both Teams to Score (BTTS), Over / Under 2.5 Goals, Correct Score, Double Chance, and Accumulator Tips.

About PredictLix

Founded in Kisumu, Kenya, in early 2026, PredictLix is a free football predictions platform powered by machine learning and real-time sports data. The platform serves a global audience and is accessible without registration at <https://predictlix.com/>.
