

## **Music Designer Bradley Spalter Unveils AI "Sovereign Sign Protocol" Strategy to Rebuild Legacy Music Catalogs**

Grammy-winner Bradley Spalter debuts the SPALTER Reimagined roadmap to revitalize 250+ legacy works via AI. Featuring artists Aura Vane and Julian Sterling, the strategy targets a 2026 pivot to Hallwood Media sync markets.

**Los Angeles, California Apr 10, 2026 (IssueWire.com)** - At the center of this strategy is the Sovereign Sign Protocol (SSP), a technological framework designed to transform "lost" legacy masters into high-fidelity, commercially competitive assets. Spalter, who helped launch Clive Davis's J Records and produced hits for legends like Gladys Knight, is now applying a Quincy Jones-style "Auteur" approach to the AI era.

"We aren't just using AI to make music; we are using it to design hits," says Spalter, CEO of Spalter Entertainment Technologies. "The industry is sitting on a 'Black Box' of unexploited treasures. SPALTER Reimagined is the roadmap that unlocks that vault, turning legacy DNA into 2026-ready content."

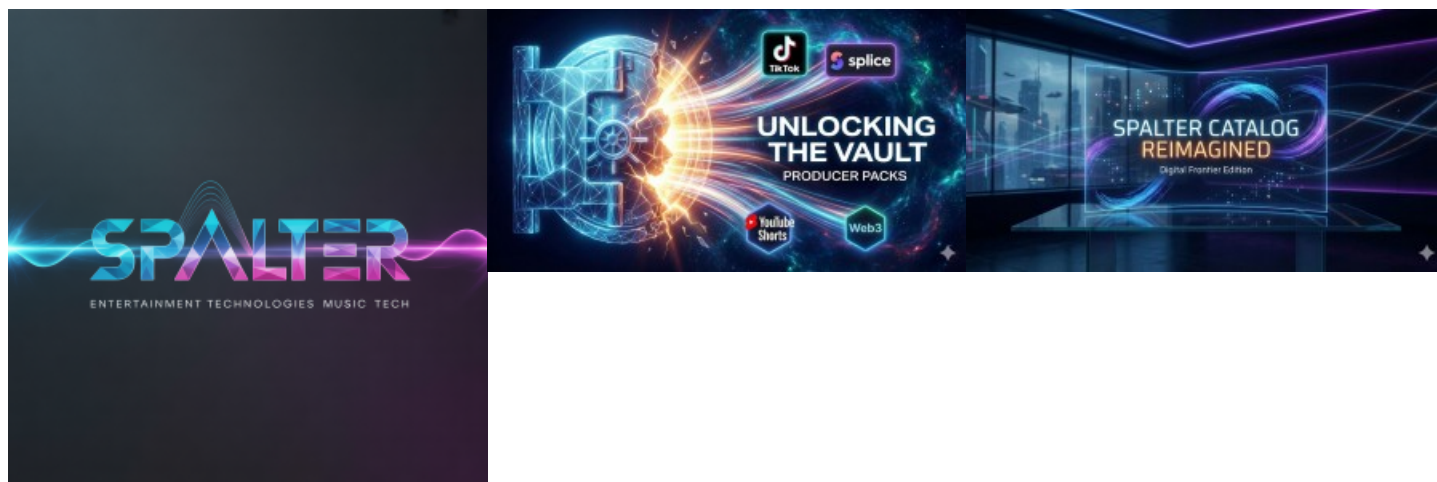

The strategy features the digital unveiling of Aura Vane, an elite AI-human hybrid artist. Spalter has developed a high-end, AI-generated music video of Aura Vane performing a reimagined version of the Christina Milian hit "Whatever You Want" as a definitive benchmark for the technology. The roster of AI artists also includes Julian Sterling and Elio Soul.

The announcement comes as Spalter moves to reclaim a catalog of over 250 unreleased works from Warner Chappell under Paragraph 3.3 of his legacy agreements, citing a strategic pivot toward the new WMG/Suno AI landscape. Spalter is currently aligning the project with major Hollywood power-centers, including Hallwood Media, to serve the high-end film, television, and integrated branding markets.

"The era of the 'lost tape' is over," Spalter concludes. "If a song exists in the digital ether, it can be reimagined. We are giving the creators their power back."

About Spalter Entertainment Technologies:

Spalter Entertainment Technologies is a music-tech firm specializing in neural audio reconstruction and AI-artist development. Founded by Bradley Spalter, the company is the architect of the Sovereign Sign Protocol (SSP).
