

## **Peymo Payment Gateway Approved on WordPress, Unlocking Crypto Payments for Millions of Merchants**

**London, United Kingdom Apr 13, 2026 ([IssueWire.com](https://www.issuewire.com))** - Peymo, the next-generation hybrid payment platform bridging crypto and everyday banking, today announced that its payment gateway plugin has been officially approved on the WordPress Plugin Directory, enabling seamless integration with WooCommerce.

Today, over 580 million people worldwide hold cryptocurrency — yet almost none can use it in everyday payments. Peymo is addressing this gap by enabling merchants to accept crypto as easily as traditional online payments.

This milestone gives Peymo immediate access to millions of merchants globally, allowing them to accept cryptocurrency payments directly on their websites through a simple plugin installation. As WooCommerce powers a significant share of global e-commerce, the approval represents a major step toward bringing real-world utility to crypto at scale.

With the Peymo plugin, merchants can seamlessly accept crypto payments while choosing to settle in either crypto or fiat — removing volatility concerns and lowering the barrier to adoption. The integration fits directly into existing checkout flows, making crypto payments simple, familiar, and frictionless.

*“This is a key milestone in our mission to make crypto usable in everyday payments,”* said Tomas Bartos, CEO of Peymo. *“For the first time, millions of merchants can instantly enable crypto payments and tap into a global base of over 580 million crypto holders.”*

### **Built-in Referral Engine to Drive Scalable Growth**

Alongside the launch, Peymo is introducing a built-in referral mechanism designed to accelerate merchant onboarding at scale. Users can generate a referral link directly within the Peymo app and share it with WooCommerce merchants.

If a merchant installs the Peymo plugin and begins accepting payments through that referral, the referring user earns a share of transaction revenue — effectively turning Peymo’s user base into a global, incentive-driven distribution network.

### **Expanding Access Beyond the Peymo Ecosystem**

In an upcoming release, Peymo will allow customers to complete payments even without a Peymo wallet. While Peymo users will benefit from lower fees and a more seamless experience, this functionality opens the platform to mainstream users while maintaining a strong incentive to join the ecosystem.

### **Scaling Across Global E-Commerce Infrastructure**

The WooCommerce launch marks the first step in Peymo’s broader e-commerce expansion strategy. The company is now preparing integrations with Shopify and Wix, which together power many millions more websites globally — significantly expanding Peymo’s potential merchant reach.

As Peymo continues to scale, the platform combines decentralized crypto capabilities with traditional banking infrastructure — including payment cards, local accounts, and fiat settlement — positioning itself as a comprehensive solution for the future of global payments.
