# HEALTHCARE BUILT FOR THOSE WHO RUN TOWARDS DANGER

GLP-1 WEIGHT LOSS  
TRT/HRT  
PERFORMANCE MEDICINE  
SEXUAL HEALTH  
HAIR

PEAK PERFORMANCE. MISSION READY.

Prescription required. Treatment determined by a licensed provider. Individual results may vary.

**Denver, Colorado Apr 15, 2026** ([IssueWire.com](https://www.IssueWire.com)) - RespondWell, LLC today announced the launch of RespondWell, a direct-to-consumer telehealth platform designed exclusively for first responders. The platform connects firefighters, law enforcement officers, emergency medical personnel, and dispatchers nationwide with licensed providers from its partner Medical Group and FDA-registered compounding pharmacies – delivering prescription treatments for GLP-1 weight management, testosterone replacement therapy (TRT), sexual health, hormone optimization, and growth hormone support directly to patients' doors.

The platform was built around a simple premise: first responders deserve healthcare that works on their schedule, not the other way around.

RespondWell was co-founded by active first responders Joe and Jake, who built the platform after experiencing firsthand the barriers their community faces accessing consistent, effective healthcare.

"I spent years on the job watching guys push through low T, weight gain, and burnout because the healthcare system made it too hard to get help," said Joe, co-founder of RespondWell. "We built this because we lived it – and we're still living it."

"Six years into the GLP-1 era and guys are still walking out of their doctor's office with a lecture about eating better and hitting the gym," said Jake, co-founder of RespondWell. "The access problem didn't go

away. When your life – and the lives of the people counting on you – depend on you being fit for duty, you shouldn't have to fight your own healthcare system to get there."

"At RespondWell, performance is a normal conversation," said Joe. "First responders aren't cheating and they're not taking shortcuts. The job destroys your hormones, wrecks your sleep, and grinds down your body. Real, documented physiological consequences of this career – and then the system treats you like you're asking for something suspicious when you want to fix it. That stops here."

## How It Works

Patients complete a brief online health assessment — typically in under 10 minutes. A licensed provider from RespondWell's partner Medical Group then conducts a clinical evaluation asynchronously where permitted — meaning the provider reviews, assesses, and responds on their end without the patient needing to be present at a specific time. It's a real medical visit, built around the patient's schedule instead of the other way around. Certain treatments, including testosterone replacement therapy, require a video consultation with a licensed provider. The entire process happens online, with no waiting rooms, no in-person visits, and no unnecessary delays. If clinically appropriate, a prescription ships directly from an FDA-registered partner pharmacy. Average turnaround is four hours.

Treatment categories currently available on the platform include:

- **GLP-1 weight management** – compounded semaglutide and tirzepatide for clinically supervised weight loss
- **Testosterone replacement therapy (TRT)** – for men experiencing low testosterone, a condition disproportionately affecting those in high-stress occupations
- **Sexual health** – including tadalafil and TriMix for erectile dysfunction, delivered discreetly
- **Hormone optimization** – enclomiphene and NAD+ for performance and longevity support
- **Growth hormone support** – sermorelin to support recovery, sleep quality, and long-term physical performance in those whose bodies are under sustained occupational stress

All treatments are prescribed by licensed providers and dispensed by FDA-registered pharmacies.

## Built for the Job

Research consistently shows that first responders – including the dispatchers who coordinate every call but rarely get counted – face elevated rates of metabolic dysfunction, hormonal imbalance, and weight-related health conditions – driven by irregular sleep, chronic occupational stress, and limited access to consistent care. Despite these known risks, most telehealth platforms are designed for a general population with standard schedules and predictable routines.

RespondWell was purpose-built for the tactical athlete: fast intake, real providers, pharmacy-grade medications, and ongoing follow-up care that doesn't require the patient to rearrange their shift. The platform is available to first responders in all 50 states and has received LegitScript certification, meeting rigorous standards for legitimacy, compliance, and transparency in online healthcare.

## Getting Started

First responders can complete their online health assessment at <https://respondwell.health>.

## About RespondWell

RespondWell, LLC is a Denver, Colorado-based telehealth technology platform serving first responders nationwide. The platform connects patients with licensed providers from its partner Medical Group and FDA-registered compounding pharmacies for prescription wellness treatments. All clinical decisions are made by independent licensed healthcare providers.
