

R&G Plumbing Deepens Commitment to Gordon with Expanded 24/7 Services

Sydney, New South Wales May 11, 2026 ([Issuewire.com](https://www.issuewire.com)) - Decade-old firm brings emergency plumbing, gas fitting, and drain solutions directly to Gordon homes and businesses — day or night.

R&G Plumbing, Gas & Drainage, a trusted residential and commercial plumbing specialist with over 15 years of service across Sydney's North Shore, has officially expanded its service footprint in Gordon. The move responds to surging local demand for fast, reliable trade expertise and brings professional plumbing assistance closer to where families and businesses actually need it.

The expanded offering includes round-the-clock emergency response — a direct answer to one of the most common pain points for property owners: waiting hours for urgent help. R&G's qualified technicians are now dispatched from a local base, cutting response times for Gordon residents in the suburbs of Killara, Pymble, Turramurra, and Lindfield.

Services now available to Gordon customers span the full spectrum of plumbing needs:

- Emergency repairs
- Drain cleaning

- Gas fitting
- Pipe Relining
- General maintenance
- Hot water systems
- Leak detection

"In 15 years on Sydney's North Shore, we have learned that what matters most to families is one thing: someone who shows up fast and tells you the truth about the cost. That is the standard we hold ourselves to in Gordon — every call, every hour."

— Company Director, Jeremy Grose

All work is carried out by licensed NSW tradespeople using current equipment and compliant materials. The company holds a commitment to strict safety standards on every job, whether a routine inspection or an overnight burst-pipe emergency. Every quote is provided upfront, with no hidden call-out fees.

Gordon residents and local businesses are encouraged to save the company's contact details before an emergency arises. Same-day appointments are available for non-urgent jobs, with priority dispatch reserved for active leaks, gas concerns, and drainage failures.
