

The Ultimate Guide to Lamborghini Forged Wheels: Lightweight, Strong, and Customizable

Brighton, Colorado Apr 16, 2026 ([Issuewire.com](https://www.issuewire.com)) - Lamborghini has long represented the pinnacle of automotive engineering—machines sculpted from speed, aggression, and cutting-edge technology. Yet even the most extraordinary production supercar must still conform to mass-production standards. For passionate owners, this often leaves one critical question unanswered: how can a driver truly imprint their own identity on a vehicle already regarded as an icon?

This is where the philosophy of [Lightweight Lamborghini Forged Wheels with 100% Fitment Guarantee](#) comes into play. Wheels are not merely functional components; they are one of the most visible and defining elements of a supercar’s design language. The right set can elevate a Lamborghini from a factory masterpiece to a deeply personal statement—an extension of the driver’s taste, ambition, and individuality.

At Splux Wheels, this philosophy is captured in a simple but powerful motto: “BE NO ONE ELSE — YOUR RIDE YOUR CALL.” The idea goes beyond aesthetics. It means injecting the soul of the owner into the raging spirit of the bull, transforming performance engineering into a personal work of art.

Central to this philosophy is the exclusive “**300 Club**” principle. Splux deliberately refuses large-scale mass production. Each year, the brand accepts commissions from **only 300 distinguished owners worldwide**. This limitation ensures that every project receives extraordinary attention to detail and that each finished set remains genuinely rare.

In an industry often dominated by inventory and ready-made products, Splux takes the opposite stance: **there are no stock wheels**. Every set is **tailor-made** from the ground up. Because at the highest level of luxury, personalization is not optional—it is essential.

The guiding philosophy is clear:

Your Wheels, Your Car, Your Personality.

A wheel is not just a component; it is the most visible extension of the owner's identity.

Engineering Excellence: The Physics of “Tailor-Made”

Generic aftermarket wheels often promise compatibility with multiple vehicles. However, such “universal fit” solutions inevitably compromise the very engineering principles that define Lamborghini's DNA.

Every Lamborghini—from the Huracán to the Revuelto—is built around precise parameters: suspension geometry, braking systems, weight distribution, and aerodynamics. Installing a generalized wheel design can disturb these carefully calibrated dynamics.

Splux approaches the problem from the opposite direction. Instead of adapting wheels to cars, **each wheel is engineered specifically for the vehicle and configuration**.

Aerospace-Grade Forging

At the heart of Splux engineering lies **6061-T6 aerospace-grade aluminum**, forged under extreme pressure to create a dense, highly resilient structure. Compared to typical OEM cast wheels, forged aluminum provides significant advantages:

- **Higher structural strength**
- **Improved durability**
- **Lower overall weight**

This advanced forging process allows Splux wheels to maintain exceptional rigidity while dramatically reducing mass.

The Power of Reduced Unsprung Mass

One of the most important performance benefits comes from reducing **unsprung mass**—the weight not supported by the suspension, such as wheels and tires.

Lower unsprung mass directly improves:

- **Acceleration and power-to-weight ratio**
- **Braking responsiveness**
- **Suspension feedback and handling precision**

For a Lamborghini designed to push engineering limits, these improvements translate into sharper dynamics and a more connected driving experience.

Pricing Philosophy: Rarity Has Value

Splux maintains a strict **no-discount pricing policy**. This is not a marketing tactic but a reflection of its

commitment to exclusivity and engineering depth.

The company operates under a rigorous pricing evaluation system that continuously assesses:

- Global demand
- Order saturation levels
- Engineering workload

By focusing its annual capacity on only **300 projects**, Splux ensures every client receives a **high-concentration engineering experience**—where time, expertise, and craftsmanship are dedicated fully to each set.

The result is not simply a product, but a scarce automotive asset.

Fitment Mastery: 100% Fitment Guarantee or Nothing

Fitment is one of the most critical factors when upgrading wheels on a Lamborghini. Even small deviations in offset, brake clearance, or suspension geometry can compromise performance or appearance.

Splux approaches this challenge with a strict philosophy: **either the fitment is perfect, or it is not delivered at all.**

Compatibility Across All Configurations

Splux engineered wheels can accommodate virtually any Lamborghini setup, including:

- **Factory stock configurations**
- **Widebody conversions**
- **Upgraded braking systems**
- **Lowered suspension via air ride or coilovers**

Each wheel specification is calculated to maintain optimal geometry while achieving the desired visual stance.

Brake System Clearance

Lamborghini's **Carbon Ceramic Braking (CCB)** systems are among the most advanced in the industry. Splux designs guarantee full clearance for both:

- Factory ceramic brake systems
- Aftermarket **6-piston or 8-piston or 10-piston big brake kits**

Locking System Compatibility

Many Lamborghini models feature distinctive wheel mounting systems, including:

- **Traditional 5-lug setups**
- **Center-lock systems** used on models such as the **SVJ, STO, and Revuelto**

Splux wheels are engineered to fully support both architectures.

The Perfect Stance

Fitment is also about aesthetics. Splux engineers calculate offset and width precisely to achieve the owner's desired look:

- **Flush**– perfectly aligned with the fender
- **Tucked**– slightly hidden under the arch
- **Poke**– aggressive outward stance

All of this is achieved **without spacers**, preserving structural integrity and performance.

Absolute Customization: Every Detail Is Yours

One of the defining features of Splux is its extensive personalization system, allowing owners to build a truly one-of-one wheel design.

Through the **online configurator**, customers can explore six major customization dimensions.

1. Design

Choose from a range of design languages, including:

- Classic **Y-spoke patterns**
- Timeless **5-spoke layouts**
- Aggressive **deep concave designs**
- Ultra-bold **deep-lip architectures**

2. Size

Splux supports a wide sizing spectrum:

- **16 to 26 inches in diameter**
- **7J to 14J widths**

This flexibility allows precise tuning for both performance and stance.

3. Finish

Finish options include:

- Multi-color combinations
- Lamborghini factory paint matching
- Brushed metal textures
- High-polish surfaces

4. Hardware

Bolts can be customized by:

- Material type
- Color finish

5. Center Caps

Owners may design personalized **center caps**, reinforcing brand identity or personal symbolism.

6. Engraving

Subtle engraving options allow:

- Personal logos
- Commemorative text
- Unique identification marks

Structural Choices

Splux offers three structural wheel constructions:

- **Monoblock (1-Piece)**– lightweight and performance-focused
- **2-Piece**– balanced between strength and design flexibility
- **3-Piece**– ultimate customization and visual complexity

Introducing the RCF Series: Real Carbon Fiber

One of the most exciting innovations is the **2-Piece Real Carbon Series**.

This ultra-limited collection features:

- **100% real carbon fiber barrel**
- **CNC forged aluminum spokes**

The result is an extraordinary fusion of advanced materials, offering exceptional lightness and striking aesthetics.

Every set is **built to order** and engineered without compromise—up to 25% lighter compared to standard forged aluminum wheels.

The Concierge for the Lamborghini Purist

Customization at this level requires more than simple order processing. Splux operates with a unique **4-on-1 concierge team structure**.

For every Lamborghini client, a dedicated team manages the entire project—from design consultation to engineering confirmation to production, delivery to the customer, and final installation.

This approach ensures that the brand's designers and engineers never misinterpret the **original DNA of the vehicle**.

Aesthetic Confirmation

One of the most valuable services provided is the **rendering and stance visualization process**.

These digital previews allow owners to evaluate how the wheel design interacts with key Lamborghini styling elements:

- Signature air intakes
- Bodyline geometry
- Wheel arch proportions

The goal is not merely visual approval but **perfect harmony between wheel and vehicle design language**.

Conclusion: The New Gold Standard

Lamborghini ownership represents a celebration of engineering brilliance and emotional design. Yet such extraordinary machines should never be limited by standardized solutions.

Splux has established a new benchmark for Lamborghini wheel customization—where engineering precision, exclusivity, and artistic individuality converge.

With forged aerospace materials, a strict 300-client annual limit, and a commitment to **100% fitment perfection**, the brand continues to redefine what bespoke supercar components can be.

For Lamborghini owners who believe their car deserves more than off-the-shelf solutions, the journey begins with imagination.
