

## Wireless Hall of Famer Brad Horwitz Backs Albireo AI in Strategic Investment in Applied AI for Critical Infrastructure

Strategic investment underscores growing momentum behind AI-driven telecom infrastructure intelligence and data monetization

 **ALBIREO AI** From Data Chaos to Trusted Intelligence

**Delaware city, Delaware Apr 30, 2026 ([Issuewire.com](http://Issuewire.com))** - Albireo AI, LLC, today announced a strategic investment from Brad Horwitz, a Wireless Hall of Fame inductee and one of the telecom industry's most respected leaders. The investment signals growing momentum behind the use of Applied AI to transform telecom infrastructure data into trusted, decision-ready intelligence.

While the terms of the investment were not disclosed, Horwitz's involvement reflects a broader shift in telecom: from data chaos to data monetization, where trusted, decision-ready infrastructure data becomes a catalyst for faster decisions, new revenue opportunities, and greater asset value.

*"We are creating a new category in telecom: Trusted Data Intelligence,"* said Leticia Latino-van Splunteren, Co-Founder and CEO of Albireo AI. *"With Albie, the first telecom-specific AI Agent, users can access that intelligence through natural-language questions and trusted answers. Brad's investment is especially meaningful because he has helped define multiple chapters of the wireless*

industry. His belief in Albireo is a powerful validation of the category we are creating, the problem we are solving, and the opportunity ahead.”

*“I invested in Albireo AI because I have spent my career building and operating networks around the world, and I can see the practical impact Albie will have,” said Brad Horwitz. “Telecom has struggled with unreliable infrastructure data for decades. As AI hype accelerates, the industry cannot afford solutions built on weak data foundations or disconnected from operational reality. Albireo is focused on the substance behind the technology, and with solutions already being delivered, customers engaged, and real demand emerging, the opportunity became even more compelling.”*

The announcement comes as Albireo AI prepares to showcase its platform at Connect (X), happening May 4-6 in Fort Lauderdale, FL, where the company will demonstrate how Applied AI is enabling telecom stakeholders to accelerate infrastructure data monetization and transition toward intelligence-driven operations.

### **About Albireo AI**

Albireo AI is an Applied AI company focused on accelerating data monetization across telecom infrastructure. By combining advanced data capture, telecom engineering expertise, and artificial intelligence, Albireo transforms fragmented infrastructure data into trusted operational intelligence, enabling critical infrastructure owners, operators, and service companies to make faster decisions, unlock new revenue streams, and maximize asset value.

Albireo AI is the creator of Albie, the first telecom-specific AI Agent designed to help users access trusted infrastructure intelligence through natural-language questions and validated answers.

### **About Brad Horwitz**

Brad Horwitz is a globally recognized wireless pioneer, entrepreneur, and industry builder with more than four decades of experience shaping telecommunications across multiple continents. He is the President and CEO of Trilogy International Partners and a founding member of Trilogy Equity Partners, and has played a foundational role in building and operating mobile networks across Asia, Europe, Africa, Latin America, and the Caribbean.

Over his career, Brad has led the development of more than a dozen GSM systems worldwide, including establishing the first GSM network in Asia, and has helped deliver wireless services to over 10 million customers. His ventures have created more than 25,000 jobs globally, with a strong emphasis on local workforce development and market-specific innovation. He has served as Chairman of Hong Kong Broadband and as a board member of the Center for Global Development.

In addition to his business leadership, Brad is recognized for his humanitarian impact, including leading communications recovery efforts following the 2010 Haiti earthquake, and has been honored with the U.S. Department of State’s Award for Corporate Excellence and the Cinema for Peace Humanitarian of the Year Award.
