

Zentria Flow Launches AI Profit Intelligence Terminal in New York; Founder Orhan Savash Targets 3% Import Margin Leak

Led by Orhan Savash, Zentria Flow introduces an autonomous financial fortress to protect US mid-market importers from hidden customs duties and manual entry errors.

New York City, New York May 25, 2026 (IssueWire.com) - Zentria Flow, a disruptive pioneer in AI-driven financial logistics, today announced the official launch of its **Autonomous Profit Intelligence Terminal**. Headquartered in New York, the platform represents a paradigm shift in how global importers manage their bottom line, moving beyond traditional tracking into the era of surgical profit protection.

The launch, spearheaded by Founder and Strategic Business Developer **Orhan Savash**, addresses the most critical pain point in modern supply chains: the "3% margin leak." This invisible erosion of profit, caused by manual data entry errors and outdated landed cost estimation, has long plagued US mid-market importers. Zentria Flow now provides a definitive "Financial Fortress" to secure these vulnerable margins.

"At Zentria Flow, we are ending the era of 'best-guess' logistics," says Orhan Savash, Founder of Zentria Flow. "My vision was to build a terminal that provides absolute financial clarity. We have created a verification layer that allows CFOs to see their exact unit-level landed costs with 99% accuracy before a shipment even leaves the port. We are here to ensure that profit is protected by intelligence, not left to chance."

The Zentria Flow terminal introduces four core pillars of autonomous intelligence:

- **Zentria Pouch (AI Extraction):** An advanced AI engine that parses complex, multi-page commercial invoices in under 10 seconds, eliminating human error entirely.
- **Live Tariff Intelligence:** Under the strategic direction of **Orhan Savash**, the platform autonomously cross-references live US Federal Register and global customs databases to flag anti-dumping risks in real-time.
- **Boardroom-Ready Reporting:** Generates high-end financial dockets that justify every cent of the landed cost, designed specifically for executive-level audit and compliance.
- **No-Portal Integration:** An AI-native specialist approach that allows for high-speed execution without the burden of long IT implementation cycles.

Orhan Savash has engineered Zentria Flow to sit atop existing logistics data, providing a specialized financial intelligence layer that traditional ERPs and logistics providers lack. To demonstrate the terminal's precision, Zentria Flow has opened a public demonstration of its **Landed Cost Calculator** at zentriaflow.com/landed-cost-calculator, where importers can instantly audit a recent invoice to discover hidden margin leaks.

About Zentria Flow: Zentria Flow is an AI-native Profit Intelligence platform headquartered in New York, NY. Founded by **Orhan Savash**, the company combines deep expertise in international manufacturing with cutting-edge autonomous agents to protect the profitability of high-volume global importers.
