

## A Review of Nine Years of Growth: How BEYAQI Leads as a Global Leading Deodorant Bottle Solutions Provider

Hangzhou, Zhejiang May 17, 2026 ([Issuewire.com](https://www.issuewire.com)) - Established in 2017, [BEYAQI](#) has rapidly ascended to become a Global Leading Deodorant Bottle Solutions Provider, bridging the gap between innovative design and large-scale industrial manufacturing. Headquartered in Hangzhou with a strategic production base in Yuyao, the company has spent nearly a decade refining its technical expertise to meet the stringent demands of international cosmetic brands. By maintaining a daily production capacity exceeding 4.8 million pieces, the organization demonstrates a robust infrastructure designed to support the dynamic needs of the B2B trade sector, focusing on airless systems, roll-on containers, and [specialized deodorant stick packaging](#).

### The Evolution of Technical Excellence and Production Infrastructure

The journey of BEYAQI's growth is defined by a consistent expansion of its production capabilities and a commitment to independent research and development. In the early years following its founding, the company focused on establishing a reliable manufacturing foundation in Yuyao, capitalizing on its

proximity to the Ningbo and Shanghai ports to streamline international logistics.

- **Production Foundation:** A critical pillar of this infrastructure is the **Glass Bottle Production Base**, which has been operating for **eight years**. This facility is central to BEYAQI's ability to serve high-end cosmetic brands that require a premium aesthetic combined with superior chemical resistance. The base specializes in the automated production of glass roll-on bottles, glass deodorant bottles, and specialized deodorant sticks. By integrating high-precision automatic production lines, BEYAQI ensures that every glass container meets rigorous quality standards while maintaining the scale necessary for global distribution. This facility offers comprehensive services from initial design to final manufacturing, allowing for custom solutions that align with the specific branding and functional needs of international clients.
- **Growth Phase:** Following its initial successful market entry, the company underwent a strategic transition from a component manufacturer to a provider of comprehensive packaging systems. During this growth phase, the focus shifted toward integrating advanced glass processing and assembly automation. This evolution was necessary to manage the complexity of high-clarity containers, such as the **30ml-50ml Cylinder Roll-on Deodorant and Essential Oil Bottles**. These clear transparent perfume glass roll-on bottles represent a significant technical milestone, as they require perfectly smooth internal surfaces and precise neck finishes to ensure the roller ball assembly fits securely without leakage. The development of these glass solutions highlights a shift toward luxury and durability, meeting the premium market's demand for high-transparency packaging that showcases the product's natural color.
- **Global Expansion:** In the subsequent period leading into the present, BEYAQI further solidified its position by diversifying its material applications and enhancing its technical service suite. The technical infrastructure now supports sophisticated secondary processing, including silk-screen printing, hot stamping, and custom color matching. This allows brands to achieve a distinct visual identity without compromising the structural integrity of the packaging. Quality assurance is built into this infrastructure; from the selection of raw materials to the final inspection on the automated lines, every step is monitored to ensure compliance with international standards like ISO and RoHS. This end-to-end control—from design and mold development to large-scale automated output—is what allows BEYAQI to maintain its status as an industry benchmark.

## Innovation in Deodorant Stick and Roll-On Packaging

A core pillar of the company's success lies in its specialized focus on deodorant bottle solutions. Unlike standard cosmetic containers, deodorant packaging requires a deep understanding of product viscosity and application methods. The portfolio features a wide range of designs, from luxury small ring deodorant stick containers to high-capacity glass roll-ons. One notable advancement is the implementation of specialized roller ball mechanisms and secure screw-cap closures. These designs ensure that the internal formula remains stable and protected from oxidation, which is critical for skin care products containing volatile essential oils or premium fragrances.

These products often center on the "Refillable" and "High-Transparency" functionality. Glass technology is particularly vital for high-end formulations, as it provides a superior barrier against gas permeation and does not react with complex chemical ingredients, thereby extending the shelf life of the product. BEYAQI's ability to manufacture these cylinder glass roll-on bottles at scale—while maintaining strict quality control—has made them a preferred partner for brands seeking to combine aesthetic clarity with mechanical reliability.

Furthermore, the design of the clear transparent glass roller bottle showcases the company's attention to ergonomic detail. By utilizing premium glass materials, the containers offer excellent clarity and a

substantial hand-feel. The integration of precision-engineered roller balls requires exact tolerances to ensure consistent liquid release over the product's lifespan, a technical challenge that BEYAQI has mastered through iterative design and rigorous testing.

### **Future-Proofing Sustainable Packaging Solutions**

As the industry moves toward 2026 and beyond, the focus on reducing the environmental footprint of packaging continues to intensify. BEYAQI's strategic goal is to balance product excellence with environmental responsibility. This involves the optimization of manufacturing processes to reduce energy consumption and the promotion of glass—a highly recyclable material—as a sustainable alternative for luxury packaging. The shift toward durable, reusable glass containers is a primary example of this strategy in action, providing consumers with a premium experience while supporting circular economy goals.

In conclusion, the nine-year growth of BEYAQI reflects a broader narrative of industrial modernization and market responsiveness. From its origins as a specialized manufacturer in 2017 to its current status as a global leader in deodorant bottle solutions, the company has maintained a trajectory of innovation and quality. By combining a high-capacity production base with specialized technical expertise and a customer-centric service model, the organization is well-positioned to lead the next generation of cosmetic packaging solutions.
