

Andrew Kaiser of Quincy Advocates for Stronger Standards in Animal Care

Andrew Kaiser of Quincy, Illinois draws on decades of veterinary experience to highlight the importance of communication, education, and consistent care in animal health.

Quincy, Illinois May 5, 2026 ([IssueWire.com](https://www.issuewire.com)) - Andrew Kaiser of Quincy, a veterinarian with more than 40 years of experience, is speaking out about the importance of maintaining high standards in animal care. Drawing from decades of hands-on work in clinics, shelters, and wildlife rehabilitation, Kaiser is encouraging both pet owners and professionals to focus on consistency, education, and clear communication.

Kaiser began his career in 1975 after earning his Doctor of Veterinary Medicine degree from the University of Missouri. Over the years, he built and led Katherine Road Animal Hospital for more than three decades, where he emphasized structured care systems and strong client relationships.

“I always believed that doing things the right way matters,” Kaiser says. “You can’t cut corners when it comes to animal health.”

Why Veterinary Standards Matter More Than Ever

Across the United States, approximately **70% of households own a pet**, according to the American Pet Products Association. At the same time, the demand for veterinary services continues to grow, placing pressure on clinics and professionals to deliver consistent, high-quality care.

Experts also note that communication gaps between veterinarians and pet owners can lead to misunderstandings in treatment plans, medication use, and follow-up care.

Kaiser believes this is where improvement is needed most.

“If you don’t take the time to listen to clients, you miss important details,” he explains. “Better communication leads to better outcomes.”

His perspective comes from years of direct interaction with clients. He built long-term relationships by focusing on trust and clarity, something he sees as essential in today’s fast-paced environment.

A Call for Continuous Learning in Veterinary Medicine

Veterinary medicine is constantly evolving. New treatments, technologies, and research findings require professionals to stay informed.

Kaiser says ongoing education is not optional.

“I never stopped learning,” he says. “Medicine changes, and you have to keep up if you want to provide the best care.”

According to the American Veterinary Medical Association (AVMA), continuing education is a key factor in improving patient outcomes and maintaining professional standards across the industry.

Kaiser also stresses that learning should extend beyond clinical skills. Practice management, team training, and ethical decision-making all play a role in long-term success.

Expanding Awareness of Wildlife and Shelter Care

Throughout his career, Kaiser worked beyond traditional clinic settings. He played a key role in creating the City of Quincy Animal Shelter, providing citizens with an important local alternative to the humane society for animal care and placement. He also developed a raptor rehabilitation program dedicated to the treatment and recovery of injured birds of prey as well as any wildlife.

These experiences shaped his view of veterinary care as a broader responsibility.

“Wildlife and shelter animals often don’t have advocates,” he says. “It’s important that professionals step up where they can.”

In the U.S., millions of animals enter shelters each year. Organizations like the ASPCA estimate that over 6 million companion animals enter shelters annually, highlighting the need for community involvement and veterinary support.

Kaiser believes that raising awareness about these issues can lead to better outcomes for both animals and communities.

What Individuals Can Do to Support Animal Health

Kaiser emphasizes that improving animal care is not limited to professionals. Pet owners and community members can take meaningful steps on their own.

“People don’t have to be experts,” he says. “They just have to be attentive and willing to learn.”

He encourages individuals to:

- Ask questions and seek clear explanations during veterinary visits
- Follow treatment plans carefully
- Stay informed about basic animal health needs
- Support local shelters and community programs
- Take time to understand the responsibilities of pet ownership

“Small actions add up,” Kaiser says. “Consistency is what makes the difference over time.”

A Lifetime Perspective on Service and Responsibility

Kaiser’s career reflects a long-term commitment to both animals and the people who care for them. From building a veterinary practice to supporting community organizations, his work has centered on service.

“I always tried to get better every day,” he says. “That mindset applies to everyone, not just veterinarians.”

His message is simple: strong standards, clear communication, and a willingness to learn can improve outcomes across the board.

Call to Action

Andrew Kaiser of Quincy encourages individuals to take an active role in animal care by staying informed, asking questions, and supporting local veterinary and shelter efforts. By focusing on consistency and communication, communities can help create better environments for animals and those who care for them.
