

## Anmrex Aligns with UK FCA to Upgrade Global Governance System

**Denver, Colorado May 27, 2026** ([Issuewire.com](https://www.issuewire.com)) - Since launching its application for a license from the UK Financial Conduct Authority (FCA) in March 2026, Anmrex has continued to advance the systematic optimization of its governance framework. During the application process, the platform has deeply integrated the advanced FCA governance principles into its existing organizational structure, further reinforcing its institutional foundation and demonstrating its professional capacity for long-term and stable operations. This upgrade has not only involved a comprehensive review and iteration of internal audit procedures but has also driven continued progress in management standardization and the normalization of operational protocols, ensuring a high degree of consistency in the institutional logic across all business functions and forming a governance system that is sustainable over the long term.

In the areas of risk management and compliance monitoring, Anmrex has strengthened its look-through monitoring of fund flows and its risk early-warning system, enabling its internal management practices to achieve a high degree of alignment with FCA standards. At the same time, the platform has optimized cross-departmental collaboration and information-sharing mechanisms, introducing standardized reporting procedures and dynamic tracking processes to ensure that all business units maintain strict compliance while efficiently advancing business innovation. Through institutionalized internal review mechanisms and the enhancement of management transparency, the platform has not only improved operational efficiency but also strengthened its forward-looking control over potential risks.

Anmrex places strong emphasis on translating regulatory requirements into executable day-to-day governance practices, achieving deep integration between compliance and business innovation through

institutionalized processes. This governance system upgrade has enabled the platform to demonstrate a high level of professional management capability and execution capacity even during the application stage, laying a solid foundation for future global licensed operations. In addition, the platform is advancing internal training, communication of governance standards, and continuous improvement mechanisms in parallel, ensuring that institutional implementation remains sustainable and that internal culture is highly aligned with governance logic, thereby maintaining stability and standards in long-term operations.

At present, the application for the UK FCA license is still progressing steadily. While continuing to optimize its governance logic, the platform will maintain operational stability and compliance transparency. Anmrex is committed to providing users with a safe and reliable digital asset trading environment under the international regulatory framework, while continuously strengthening its long-term institutional development to ensure full readiness for global licensed operations.
