Launch Your App. Grow Your Audience. Earn More.
AppConvert Kit makes it simple.

Saharanpur, Uttar Pradesh May 12, 2026 (Issuewire.com) - AppConvert Kit Launches Ready Android Studio Source Code to Convert Websites into Android Apps with AdMob Ads

India, 2026 AppConvert Kit has launched a ready-to-use Android Studio source code designed to help website owners, bloggers, students, freelancers, and digital creators convert their websites or web apps into Android applications with ease.

The product provides a lightweight WebView Android app setup with AdMob Banner Ads and App Open Ads integration. It is created for users who want to launch an Android app version of their website without building everything from scratch.

AppConvert Kit allows users to customize important app details such as app name, app icon, website URL, package name, and AdMob ad IDs. A tutorial video is also included to guide buyers through the basic setup process.

“Many creators and website owners want to launch their own Android app but find the technical process confusing. AppConvert Kit is built to make that process simpler, faster, and more affordable,” said Devansh Dhiman, creator of AppConvert Kit.

The kit is useful for bloggers, web app creators, small businesses, students, freelancers, and digital product sellers who want a simple way to convert a website into an Android app. With AdMob integration included, users can also prepare their app for monetization through ads, depending on their own app content, traffic, and AdMob approval.

AppConvert Kit is currently available at a launch offer price of ₹999. Buyers can access the product page, purchase link, and tutorial video online.
