

Bloom Labs Delivers Enterprise Web Apps in 2–4 Weeks at 40% Lower Cost Using AI-Native Development

Bloom Development Labs Corp. launches industry-specific custom web applications for gym owners, coaches, consultants, and real estate brokers — built faster and more affordably than traditional agencies through an AI-native methodology.

Los Angeles, California May 24, 2026 ([IssueWire.com](https://www.IssueWire.com)) - Bloom Labs Disrupts Custom Web App Development with AI-Native Methodology, Cutting Timelines to 2–4 Weeks and Costs by Up to 40%

Bloom Development Labs Corp., an AI-native software development firm operating across the Philippines and Singapore, today announced the full commercial launch of its custom web application development service — purpose-built to deliver enterprise-grade software systems in 2–4 weeks at approximately 40% lower cost than traditional development agencies.

The company's core methodology centers on AI-native development: leveraging modern AI tooling at every layer of the build cycle, including scaffolding, testing, deployment, and documentation. This allows Bloom Labs to reduce hand-coded boilerplate by 60–80% while maintaining enterprise-quality standards — passing those efficiency gains directly to clients through fixed-scope, fixed-price packages starting at \$5,995.

Solving the Four Pain Points Killing Most Web App Projects

According to Bloom Labs, the majority of web app initiatives fail not because of technical complexity, but because of four systemic agency problems: bloated timelines (averaging 4–6 months), inflated costs

(often \$30,000+), opaque project management, and unreliable development partners. Bloom Labs addresses each of these directly through its transparent, build-first process — where clients communicate directly with engineers via Slack or WhatsApp, receive weekly live demos, and never pay for vague "discovery" phases.

Industry-Specific Solutions for High-Growth Verticals

Bloom Labs takes a deep-vertical approach, building niche-specific software rather than generic template systems. Current live verticals include:

- **Fitness & Gym Management** (<https://bybloomlabs.com/gym-owners>): A custom retention and member management platform for independent gym owners and multi-location operators. The system features a real-time churn dashboard, automated re-engagement email sequences, Stripe/Square payment integration, and a member mobile app. Clients report recovering \$2,000–\$4,000 per month by catching at-risk members before they cancel — targeting a 20–40% reduction in churn.
- **Coaching & Consulting** (<https://bybloomlabs.com/coaches>): A branded client portal and automated booking funnel for coaches and consultants currently managing five or more disconnected tools. The system consolidates session notes, resource libraries, progress tracking, and Stripe-integrated one-click booking into a single platform — reducing friction from lead to confirmed client and recovering an estimated \$1,000–\$3,000 per month in previously lost bookings.
- **Real Estate** (<https://bybloomlabs.com/real-estate>): A custom lead management and MLS-integrated platform for real estate brokers and agents. The system includes auto-syncing MLS listings, strategic lead-capture forms, lead scoring, drip campaigns segmented by buyer/seller/inquiry type, and SMS follow-up automation. Clients report moving from 2–3 leads per month to 40+ — translating to \$4,000–\$8,000 in additional monthly commission.

A fourth vertical — **Clinics & Wellness** — is currently in development, targeting patient retention and automated booking for healthcare and wellness providers.

Three Transparent Packages. Zero Surprise Fees.

Bloom Labs offers three fixed-scope packages to accommodate different business needs. The *Express Launch* (10–14 days, \$5,995) replaces spreadsheet-based operations with a functional core system. The *Custom Build* (20–28 days, \$8,995) is the most popular option, covering multi-feature apps with CRM, customer portals, and third-party integrations. The *Enterprise* package (28–35 days, \$14,995) delivers complex multi-system platforms with advanced analytics, audit logs, public APIs, and white-glove onboarding. All packages include post-launch support windows and a 50/50 payment structure — half at kickoff, half at launch. Full pricing details are available at <https://bybloomlabs.com/#pricing>.

Proven Results Across Verticals

Bloom Labs' case studies include a B2B SaaS founder who launched a full MVP with auth, billing, and a customer dashboard in 4 weeks — achieving \$5,000 in MRR within three weeks of going live and paying 42% less than competing agency quotes. A second client, a local services business with 12 staff, replaced a WhatsApp-based operation with a full booking and inventory management system in 14

days, tripling customer bookings and cutting no-shows by 38%.

ROI Calculators Available by Industry

To help prospects quantify the business case before committing, Bloom Labs provides free 60-second ROI calculators segmented by vertical at <https://bybloomlabs.com/advantage>. Niche-specific calculators are also available for gym owners, coaches, and real estate professionals.

About Bloom Development Labs Corp.

Bloom Development Labs Corp. is an AI-native software development firm headquartered across the Philippines and Singapore, serving founders, SMEs, and growing enterprises that need custom web applications built fast, transparently, and without the overhead of traditional agencies. The company's mission is to make enterprise-grade software accessible to businesses that have historically been underserved or overcharged by the incumbent agency model.
