

BODAQ.ME Expands Regional Access to BODAQ Interior Films, Vinyl Finishes and Architectural Surface Solutions

The platform, based in Dubai, connects architects, designers, contractors, fit-out firms and installers with BODAQ finishes, product resources, samples and installer certification pathways.

Dubai, United Arab Emirates May 8, 2026 (Issuewire.com) - BODAQ.ME, the official regional platform for BODAQ interior films, vinyl finishes and architectural surface solutions, is extending access to BODAQ product information, finish collections, samples and professional resources for interior

projects across the Middle East.

BODAQ interior films are self-adhesive architectural coatings that are used to re-finish and upgrade interior surfaces such as walls, doors, furniture, ceilings, cabinets, fixtures, and panels. The films are formulated to provide project teams with the appearance of natural and beautiful materials with less disruption than is typical in traditional refurbishment.

BODAQ.ME offers architects, interior designers, contractors, fit-out companies, developers, property owners, and installers a wide selection of BODAQ finishes, from wood to stone, marble, metal, fabric, leather, concrete, solid colour, and special vinyl finishes. The platform offers product pages, design references, technical information, and sample request capabilities to aid in the specification and material selection for commercial and residential interiors.

“BODAQ.ME’s mission is to provide BODAQ interior films and vinyl finishes to professional markets working on high-quality interior projects,” a spokesman for BODAQ.ME said. The portal provides finish collections, technical information, access to samples, and installation resources that help improve project planning and execution.

[BODAQ vinyl](#) coatings are used in hospitality, retail, commercial, healthcare, education, residential and real estate environments where visual consistency, installation flexibility and reduced downtime are important. Qualified specialists can apply films to a wide range of interior substrates and are perfect for large scale restoration as well as specific surface alterations.

Through the BODAQ installer certification program, BODAQ.ME also provides access to materials and professional installation standards. This certification path is for experienced installers willing to demonstrate their expertise in film applications for architectural projects. The certification jobs include cabinet door wrap, MDF wrap, drywall wrap, corner wrap, and round table wrap, the platform said.

BODAQ.ME also provides information for companies and individuals interested in partnership through installation, referral, and distribution agreements. The programs are designed to promote regional availability, product education, and certified installation competency for BODAQ architectural surface systems.

The portal offers technical and compliance product information, including fire retardant options, material safety information, testing references, and low-VOC considerations. The materials enable designers, contractors, and procurement teams to evaluate **BODAQ interior films** against a variety of project demands.

BODAQ.ME will be the regional destination for professional interiors in the Middle East for BODAQ interior films, BODAQ vinyl finishes, and surface finishing assistance with the growing need for flexible restoration materials and architectural wrapping solutions.
