

BoldSpeak Launches Real-Time AI Speech Coach and Impromptu Speaking Analyze

Nairobi-based startup debuts cross-platform web and mobile solution offering instant feedback on pace, vocabulary, structure, and delivery to build communication confidence.

Nairobi, Kenya May 28, 2026 ([Issuewire.com](https://www.issuewire.com)) - BoldSpeak Corp., a pioneer in interactive communication technology, today announced the official release of BoldSpeak, a comprehensive AI-powered speech coaching platform. Designed to democratize high-quality public speaking and communication training, BoldSpeak is available starting today across Web, iOS, and Android platforms.

The app provides users with 24/7 access to instant, objective analytics on speaking pace, vocabulary precision, structural clarity, filler word usage, and pronunciation.

By combining state-of-the-art generative AI with an immersive, kinetic user interface, BoldSpeak addresses the widespread challenge of public speaking anxiety (glossophobia). The platform allows professionals, educators, and students to practice presentations and impromptu speeches in a secure, low-stakes environment while receiving actionable feedback.

"Effective communication is the cornerstone of professional success, yet traditional speech coaching remains a luxury accessible to few," said Jack Batian, CEO and Founder of BoldSpeak. "With BoldSpeak, we are using advanced generative AI to provide real-time, personalized feedback. Our platform doesn't just count filler words; it helps users structure their arguments, master their pacing, and deliver their message with genuine impact."

Key Innovation: Real-Time Impromptu Speech Analysis

At the core of the launch is BoldSpeak's proprietary speech analysis engine, powered by Gemini. Unlike basic recording tools, BoldSpeak evaluates speech dynamically across several dimensions:

- **Impromptu Speech Analysis & Role-Play:** Users can simulate high-pressure scenarios such as job interviews, client pitches, and spontaneous Q&A sessions. The AI evaluates how effectively the speaker structures arguments, manages transitions, and delivers cohesive messaging on the spot.
- **Gemini-Powered Structured Feedback:** The platform provides a detailed scorecard grading speech structure (opening hook, logical flow, transitions, and closing strength), vocabulary richness, pronunciation accuracy, and delivery style.
- **Pace & Articulation Drills:** For foundational skills, BoldSpeak offers specialized workouts including tongue twisters and poetry readings to optimize vocal rhythm, alongside physical "Pen Drills" for articulation.
- **Live WebSockets Coaching:** Employing a robust backend relay system, BoldSpeak offers real-time, low-latency live audio lessons, offering guidance and analytics directly during a speaking session.
- **Seamless Cross-Platform Syncing:** Built on a modern Next.js and Expo monorepo with tRPC and Better Auth, BoldSpeak allows users to transition effortlessly between practicing on a desktop web browser and recording on a mobile device.

Enterprise-Grade Security and Privacy

To protect intellectual property and user privacy, BoldSpeak is built with a security-first architecture. All audio uploads are processed via secure, short-lived storage links, and data is protected using end-to-end encryption. BoldSpeak guarantees that user recordings and speech transcripts are never exposed to public directories or used for unapproved model training.

Pricing and Availability

BoldSpeak is available to download today globally. Users can register for a free tier containing five practice sessions per month. The premium subscription, BoldSpeak Pro, is available for \$14.99 per month, unlocking unlimited practice sessions, live WebSocket-based coaching, and advanced historical analytics.
