

## Cosee Industry Wins Multi-Million-Dollar Fire Pump Contract for World-Class Tengiz Energy Project

**Shanghai, China May 22, 2026 ([IssueWire.com](https://www.issuewire.com))** - Recently, relying on its outstanding product quality, comprehensive technical solutions, and mature full-process international project execution capabilities, Cosee Industry Service Pte Ltd has successfully won the multi-million-dollar fire pump contract for the Tengiz Gas Separation and Processing Unit Project in Kazakhstan. The company has formally signed the contract with Tecnimont S.p.A., a world-leading EPC contractor, to provide a complete set of high-end fire pump systems and supporting services for this landmark global energy project. This cooperation marks not only an important milestone in Cosee Industry's internationalization process but also demonstrates the competitiveness and recognition of China's high-end industrial equipment in the core global energy market.

Located on the Caspian Sea coast in western Kazakhstan, the Tengiz Oilfield is one of the largest and deepest producing super oilfields in the world, as well as a core pillar of the energy strategy in the Caspian region. With proven geological reserves exceeding 25 billion barrels, the oilfield is jointly operated by top international energy companies and plays a pivotal role in the global energy supply system. The 4510 Gas Separation and Processing Unit undertaken by Cosee Industry is a key project for the capacity expansion, efficiency improvement, and quality upgrading of the Tengiz Oilfield. It is mainly responsible for the purification, separation, processing, and stable export of crude oil associated gas, which directly determines the oilfield's production efficiency, operational safety, and environmental compliance. As a high-standard benchmark project in global oil and gas engineering, the Tengiz project

imposes extremely strict requirements on equipment performance, quality stability, delivery schedule, and international compliance, serving as a “touchstone” for testing suppliers’ comprehensive capabilities.

As the general contractor of this project, Tecnimont S.p.A. is a leader in the global energy and petrochemical engineering sector. Headquartered in Milan, Italy, and part of the internationally renowned engineering group Maire Tecnimont, the company has nearly a century of engineering experience. Its business covers more than 50 countries and regions, focusing on EPC general contracting services in oil and gas, refining, petrochemicals, fertilizers, and new energy. Tecnimont is internationally renowned for its top-level engineering design capabilities, complete quality control system, global resource integration capabilities, and high-standard project management.

Tecnimont has long served top global energy projects and implements strict screening of partners in terms of technical strength, production capacity, delivery assurance, and compliance system. The selection of Cosee Industry as the core supplier for the fire protection system fully reflects the high recognition of Cosee Industry’s products, services, and comprehensive capabilities by a world-class EPC.

In this cooperation, Cosee Industry strictly follows the technical specifications of the Tengiz project and the highest international standards, providing an integrated solution including UL/FM certified and Russian standard compliant diesel fire pumps, electric fire pumps, jockey pumps, as well as commissioning spare parts, capital spare parts, two-year operation spare parts, and project-specific customized packaging. All equipment is elaborately manufactured at the company’s production base in China, undergoing full-process quality control covering precise design, strict raw material control, in-process inspection, and finished product testing. Featuring high temperature resistance, corrosion resistance, impact resistance, and continuous stable operation, the equipment perfectly adapts to complex working conditions on oil and gas sites and fully meets the core needs of safe production and fire emergency response.

During project implementation, Cosee Industry fully aligns with international engineering management systems and strictly complies with international engineering requirements such as ITP (Inspection and Test Plan), WPS (Welding Procedure Specification), and MTC (Mill Test Certificate). Refined and traceable management is applied to every link from raw material procurement, production and processing, in-process inspection to finished product testing, packaging, and shipment, ensuring dual compliance of product quality and project schedule.

This order adopts the delivery term of FCA Horgos Port (INCOTERMS 2020), with all deliveries scheduled to be completed in August 2026, efficiently connecting cross-border logistics and on-site installation progress to fully support the smooth progress of the overall project construction. Meanwhile, the company strictly abides by EU export compliance requirements and relevant international sanction regulations, providing complete compliance declarations to ensure full-cycle compliance, safety, and controllability of the project.

As an international enterprise deeply engaged in industrial equipment and energy supporting services, Cosee Industry has long focused on high-end sectors such as oil and gas, petrochemicals, electric power, and marine engineering. It has established a complete international project operation system, a professional technical service team, and a stable global supply chain. With reliable products, efficient services, and rigorous compliance management, Cosee Industry has won the trust and recognition of many high-quality customers worldwide.

In the future, Cosee Industry will continue to uphold the development philosophy of Safety First, Quality Supreme, Customer-Centric, and continuously strengthen technological innovation, project management, and global service capabilities. The company will provide safer, more reliable, and more efficient industrial equipment solutions for global energy, chemical, infrastructure, and other sectors.

Taking the Tengiz project as a new starting point, Cosee Industry will deepen cooperation with world-class enterprises such as Tecnimont, further explore the global high-end market, build a brand with quality, connect the world with professionalism, and contribute solid strength to global energy security and high-quality industrial development.
