

DatePhotos AI Launches as Interest in AI Dating Photos Grows 700%

Upload selfies, get 80-180 professional dating photos in 20 minutes, from \$29

Hong Kong, Hong Kong S.A.R. May 27, 2026 ([Issuewire.com](https://www.issuewire.com)) - DatePhotos AI (<https://datephotos.ai>) is now available as a dedicated AI photo generator for dating app users. The platform takes uploaded selfies and produces 80 to 180 professional-quality photos across 40+ lifestyle scenes in about 20 minutes.

Google search interest for "AI dating photos" has increased more than 700% over the past 12 months, according to DataForSEO trend data. The global online dating market now exceeds 380 million users.

Dating app match rates remain low -- 0.6% for men on average. Professional photoshoots cost \$200-500. DatePhotos AI does the same job for \$29-79 in under half an hour.

"Most people know their photos are holding them back, but hiring a photographer for a dating app feels like overkill," said the DatePhotos AI team.

How it works

Users upload 10-15 selfies. The platform trains a custom AI model on each user's face and generates photos across scenes including coffee shops, parks, beaches, and city streets. Each photo includes a Realness Score. Users get 10 free regenerations.

Pricing

Basic: \$29 (80 photos, 25 scenes) | Pro: \$49 (120 photos, 34-35 scenes) | Ultimate: \$79 (180 photos, 42 scenes). All one-time payments with a 7-day money-back guarantee.

DatePhotos AI is live at <https://datephotos.ai>.
