Jaipur, Rajasthan May 6, 2026 (IssueWire.com) - New AI suite automates report interpretation, flags critical values, and predicts lab workload — helping lab owners cut TAT by up to 40% and boost revenue without adding headcount

Dorays Technologies, the company behind DoraysLIS India's fastest-growing [Laboratory Information System](#) (LIS) trusted by over 1,500 diagnostic labs across 40+ cities and 10+ countries today announced the launch of its groundbreaking **AI-Powered Diagnostic Intelligence Engine**. This major product upgrade embeds artificial intelligence directly into daily lab workflows, giving pathology lab owners a powerful competitive edge in an increasingly demanding healthcare landscape.

With over 15 million patient records processed and a network of 20,000+ referring doctors, Dorayslis is uniquely positioned to bring AI capabilities that are purpose-built for the Indian pathology market affordable, accurate, and immediately actionable.

The Challenge Facing Lab Owners Today

India's diagnostic industry is booming but so is the pressure. Lab owners face soaring patient volumes,

staff shortages, razor-thin margins, and patients who now expect fast digital reports. Manual data entry, delayed turnaround times (TAT), and missed critical values cost labs both revenue and reputation every single day.

Dorayslis built its AI engine specifically to solve these pain points not as a future roadmap item, but as a live, integrated feature available to all subscribers starting today.

What the New AI Features Deliver for Lab Owners

The Dorayslis AI Diagnostic Intelligence Engine introduces five core capabilities:

- **Smart Report Interpretation:** The AI engine automatically cross-references patient results against clinical reference ranges, flagging abnormal and critical values instantly before reports reach the doctor's desk. This reduces the risk of missed diagnoses and elevates the quality of every report your lab produces.
- **Predictive Workload Management:** Using historical data from your lab's own records, the AI forecasts peak periods and patient load. Lab managers can proactively staff up, optimize machine usage, and eliminate the bottlenecks that cause delays during rush hours.
- **Automated Report Narrative Generation:** For common panels like CBC, LFT, KFT, and Lipid Profile, the AI drafts preliminary clinical narratives that pathologists can review and approve in seconds slashing the time spent on repetitive report writing by up to 60%.
- **AI-Assisted Billing Anomaly Detection:** The system intelligently scans billing entries for inconsistencies, duplicate charges, and under-billing directly protecting lab revenue and ensuring compliance with B2B rate agreements.
- **Intelligent Patient Engagement:** The AI personalizes follow-up messages and health reminders to patients based on their test history, helping labs improve patient retention and strengthen relationships with referring doctors.

“We built DoraysLIS from the ground up for the Indian pathology lab owner. Every feature we ship answers a real problem our customers face every day. With our new AI engine, a lab owner running three branches can now have the diagnostic intelligence of a 20-person team — without hiring a single additional person. This is the future of lab management, and we are making it available to every lab at a price that makes sense.”

— Founding Team, Dorays Technologies

Availability & Pricing

The AI Diagnostic Intelligence Engine is being rolled out as part of DoraysLIS's cloud-based LIMS platform, which starts at just **₹499 per month** making enterprise-grade AI accessible to independent labs, diagnostic chains, and hospital-linked laboratories alike. A **7-day free trial** is available with no credit card required, and the platform requires no software installation it runs entirely on any web browser, on any device.

Labs already on the Dorayslis platform will receive the AI upgrade automatically as part of their existing subscription, at no additional cost.

About DoraysLIS / Dorays Technologies

Dorays Technologies is the developer of DoraysLIS, India's leading cloud-based Laboratory Information and Management System (LIMS/LIS). The platform serves 1,500+ diagnostic labs across 40+ cities in 10+ countries, managing over 15 million patient records and supporting 20,000+ referring physicians. DoraysLIS offers comprehensive modules for pathology and radiology reporting, machine interfacing, finance and billing management, multi-location operations, B2B referral management, and now AI-powered diagnostic intelligence. The company is headquartered in Jodhpur, Rajasthan, India, and is committed to making world-class lab management technology affordable and accessible for every diagnostic center.
