

Fractional Plasma® Redefines High-Precision Skin Rejuvenation

Singapore, Singapore May 29, 2026 (Issuewire.com) - A new era of non-surgical rejuvenation has arrived with **FRACTIONAL PLASMA®**, an advanced technology now available in Singapore. Designed to **resurface, remodel, and rejuvenate**, this next-generation platform offers a precise alternative to traditional treatments, including **fractional laser skin resurfacing**.

Developed by **Brera Medical**, **Fractional Plasma Treatment** uses a patented energy system that accelerates skin recovery by up to **50%**. Through the Jovena® device, **FRACTIONAL PLASMA®** supports **tailor-made skin regeneration**, targeting multiple layers of the skin using three specialized handpieces.

Three-in-One Skin Regeneration System

plasmaROLL® – Epidermal Resurfacing

A gentle, low-downtime applicator for the face, neck, décolletage, and body. It promotes cell renewal and micro-retraction while reducing side effects on delicate areas.

plasmaTIP® – Deep Dermal Remodeling

Ideal for **active acne, scars, striae, fine lines, and wrinkles**, plasmaTIP® delivers controlled energy to remodel the deeper dermal layers.

plasmaPRO™ – Minimally Invasive Microsurgery

A selective applicator designed for the **periorbital area** (non-surgical eyelid rejuvenation) and the removal of benign lesions.

Comprehensive, Customizable Skin Rejuvenation

FRACTIONAL PLASMA® provides total skin regeneration, addressing:

- Uneven texture
- Fine lines and wrinkles
- Acne and scars
- Sagging or droopy eyelids
- Skin aging on the face and décolletage

Treatments typically take **15–90 minutes**, with visible results seen after the first session and minimal downtime.

With rising demand for effective, low-downtime rejuvenation, **FRACTIONAL PLASMA in Singapore** offers a safer, more precise, and highly customizable solution for patients of various skin types.
