

Fusionpact launches isoapplication.com—the first back-office operating system built for ISO Certification Bodies

Fusionpact launches ISOApplication.com, the first back-office engine for Certification Bodies under Global ACI. As an ISO 42001 pioneer, it unifies audit, assessment, and compliance across all ISO standards into a single intelligent system

Wilmington, Delaware May 18, 2026 ([Issuewire.com](https://www.issuewire.com)) - As the international conformity assessment sector enters its most significant structural era since the formation of the International Accreditation Forum in 1993 — marked by the launch of Global Accreditation Cooperation Incorporated (Global ACI)

on 1 January 2026, unifying IAF and ILAC into a single global accreditation authority — a disruptive technology platform has arrived to modernize the industry's operational backbone.

Fusionpact Technologies Inc., a Delaware-incorporated enterprise technology firm celebrated for its high-performance architectures, today announced the global launch of isoapplication.com — the first platform globally purpose-built exclusively for the ISO Certification Body (Registrar) back office, as distinct from client-side audit preparation tools or generic ERP systems.

Developed under Fusionpact's Compliance Tech line of business, the platform addresses a critical and largely invisible problem: while the broader compliance software market has generated billions targeting front-end, client-side audit preparation, the actual gatekeepers of the trust economy — the Certification Bodies — have been left operating on legacy, manual infrastructure. isoapplication.com fills this void.

THE VISION: SOLVING THE UNSEEN RISK IN THE TRUST ECONOMY

The core engine of isoapplication.com resolves a critical problem plaguing international conformity assessment: manual back-office workflow bottlenecks, spreadsheet-based non-conformity tracking, and subjective audit manday calculations. As national accreditation bodies — members of the Global ACI Multilateral Recognition Arrangement (MRA) such as ANAB (USA) and UKAS (UK) — apply heightened scrutiny to Certification Body peer evaluations, manual administration has become a material operational liability.

“Most compliance software on the market is built to help companies pass an audit. We built the operating system for the institutions that actually conduct and issue them. Until now, the high-stakes back-office logic — particularly manday calculations driven by strict IAF MD guidelines — has been treated as a basic, manual input. This has created a silent epidemic of inconsistent audit durations, compliance gaps during accreditation peer evaluations, and severe risks of audit rejections. At Fusionpact, we specialise in niche engineering, compliance tech, and carbon tech. With isoapplication.com, we have brought that collective engineering muscle to the conformity assessment sector. As organisations navigate AI governance under ISO 42001, our platform stands out as the only solution globally that combines an accredited workflow engine with native, responsible AI — replacing subjective interpretation with an immutable, rule-based engine that protects both a Certification Body’s bottom line and its institutional accreditation.”

— Atul Rawat, CEO, Fusionpact Technologies Inc.

STRATEGIC DISRUPTION ACROSS THREE MARKET PILLARS

- **For Certification Bodies (Registrars):** Driving Growth and Operational Efficiency

The platform functions as a complete ISO/IEC 17021-1-compliant back-office infrastructure — automating mandatory regulatory calculations, streamlining document control, managing non-conformity (NC) lifecycles, and connecting field auditors directly to back-office reviewers. Registrars can scale audit volume without increasing headcount, converting administrative backlogs into revenue growth drivers.

- **For Accreditation Bodies & Regulators:** Safeguarding Global Compliance and AI Governance

With the transition to Global ACI consolidating international oversight under a single governance

framework and MRA, institutional credibility is under greater scrutiny than ever. isoapplication.com provides an unalterable logic log for every calculation and workflow — delivering a perfectly traceable, audit-ready data path for accreditation body peer reviews. Whether evaluating traditional standards such as ISO 9001 and ISO 27001, or auditing AI-based systems under the emerging ISO 42001 framework, the platform presents national accreditation bodies with documentation that effectively neutralises the risk of critical non-conformities.

- **For Investors:** An Untapped, High-Margin B2B RegTech Opportunity

The regulatory technology sector is heavily saturated with client-facing checklist applications, driving up user acquisition costs and compressing margins. isoapplication.com enters a structurally blue-ocean marketplace — the Certification Body back office — where no purpose-built SaaS competitor exists. Backed by Fusionpact's corporate footprint across enterprise AI, functional cloud engineering, and environmental sustainability platforms (including the ForestTwin™ dMRV platform in its Carbon Tech division), this launch represents a defensible, mission-critical B2B SaaS model with strong net revenue retention characteristics and low churn by design: once a CB's operational workflow, document control, and regulatory calculations are embedded in the platform, migration cost is prohibitive.

AVAILABILITY & ACCESS

To mark the global launch and demonstrate the power of automated institutional logic, isoapplication.com is offering exclusive, limited-time trial access for qualified ISO Certification Bodies globally. Three audience-specific pathways are available:

For Certification Bodies — Free Institutional Trial:

Register at app.isoapplication.com

For Investors & Media — Platform Overview & Briefing:

Contact: invest@fusionpact.com | mediarelations@fusionpact.com

For Accreditation Bodies — Request Institutional Briefing:

ABOUT FUSIONPACT TECHNOLOGIES INC.

Fusionpact Technologies Inc. is a Delaware-incorporated enterprise technology products and consulting corporation specializing in niche engineering, compliance tech, and carbon tech. As an NVIDIA Inception Partner, Fusionpact designs cohesive digital ecosystems — leveraging advanced AI engineering, functional programming (Scala, Rust), big data platforms, and distributed systems — to modernize infrastructure and simplify high-stakes compliance processes for organizations globally. Its product portfolio includes isoapplication.com (compliance tech), ForestTwin™ (carbon dMRV), FusionKYC (financial services compliance), and EPCTender.In (infrastructure procurement intelligence).
