

High Technologies Solutions (HTS India) Launches Summer Fast-Track Technical Program for Students in New Delhi

High Technologies Solutions (HTS India) announces the launch of its 2026 Summer Fast-Track Program, providing school and college students industry-ready IT skills.

New Delhi, Delhi May 8, 2026 (IssueWire.com) - High Technologies Solutions (HTS India), a technical training organization with a 25-year legacy, has officially announced the commencement of its Summer Fast-Track Program. This seasonal initiative is designed to equip school and college students with high-demand digital skills during the upcoming vacation period, focusing on practical application rather than traditional academic theory.

As the 2026 global economy increasingly prioritizes skill-based hiring, the gap between standard education and industry requirements has become a focal point for educators. The Summer Fast-Track Program addresses this by offering condensed, intensive modules in emerging technologies.

“The objective is to provide students with a productive environment where they can transition from being passive technology users to active creators,” stated a representative from HTS India. “By utilizing the summer break, students can build a technical foundation that supplements their formal schooling and improves their future employability.”

Curriculum for School Students The program for school-level learners focuses on [logic-building and foundational programming](#). Key offerings include:

- **Python Programming:** Focused on logical reasoning and basic automation.

- **C & C++:** Essential for understanding software architecture.
- **Web Development:** Hands-on [training in HTML, CSS, and JavaScript](#).
- **Office Productivity:** Mastery of Advanced Excel and professional documentation tools.

Advanced Modules for College Students For higher education students, HTS India has introduced specialized tracks aimed at immediate industry relevance:

- [Generative AI & Data Science:](#) Training on AI-driven automation and data analytics.
- **Software Engineering:** Advanced Java and Python development.
- **Industrial Design:** AutoCAD 2D training for engineering candidates.
- **Financial Tech:** Tally + GST modules for commerce students.
- [Digital Marketing:](#) Instructional modules on SEO, SGE (Search Generative Experience), and performance marketing.

Industry Relevance and Institutional Background The shift toward skill-first hiring has prompted many organizations to look for candidates with verified technical competencies. HTS India's pedagogy emphasizes capstone projects and live simulations to mirror corporate environments. Since its inception in 2000, the institute has trained over 65,000 students, maintaining a focus on industry-oriented placement assistance and flexible learning modes, including both online and offline batches.

Interested students and guardians may contact the Kalkaji center for career counseling and specific course enrollment details.

About High Technologies Solutions (HTS India) High Technologies Solutions is an [IT training institute based in New Delhi. Established in 2000](#), the organization specializes in bridging the skill gap for students and working professionals through industry-aligned technical training.
