Press Release June 2, 2026

Newquay, Cornwall Jun 2, 2026 ([IssueWire.com](https://www.issuewire.com)) - HyperionWave Limited today announced the official launch of UnaGo (pronounced OO-NAH-GO), an AI-native multi-agent platform purpose-built to collapse the gap between strategy and execution for lean, growth-focused teams. Available starting today at unago.ai, UnaGo gives founders, CMOs and operations leaders the capability of a full

enterprise team, deployed in minutes, not months.

In a business landscape where lean teams are expected to move at an enterprise pace, UnaGo delivers a fundamentally new model: a coordinated team of AI specialists (not a single tool) that plans, acts and delivers across every function. From marketing automation and content production to data analysis, workflow orchestration and customer outreach, UnaGo handles it all from a single conversational interface connected to over 1,000 tools.

"Every day, brilliant founders and operators are held back not by lack of ideas but by lack of execution capacity," said Tom Ring, CEO and Co-founder of UnaGo. *"UnaGo is built for those people. It's not another AI assistant; it's your AI-native specialist team, ready to execute as part of your company the moment you are."*

"The infrastructure we've built at UnaGo is unlike anything else in the market," said Maksym Mednikov, CTO and Co-founder of UnaGo. *"We engineered a parallel multi-flow execution engine from the ground up, one that lets AI agents collaborate, reason and act simultaneously across real business tools and workflows. What used to take a team of ten weeks of coordination can now happen in minutes. That's not a promise; that's what we deliver."*

What makes UnaGo different

Unlike single-model AI tools that offer advice and stop there, UnaGo is built around three core pillars:

- Breadth: a coordinated team of AI specialists, each expert in its domain, working together in parallel across functions.
- Execution: AI that doesn't just advise; it acts. UnaGo connects to your real tools, real data and real workflows to deliver tangible results.
- Simplicity: access to over 1,000 integrations from one chat interface. No code, no complex setup, no silos.

UnaGo's proprietary parallel multi-flow execution engine enables teams to run complex, multi-step business operations simultaneously, dramatically compressing timelines and freeing human talent to focus on the decisions that matter most.

Built for the teams that can't afford to be small

UnaGo's target market is the mid-market growth team: CMOs, founders and COOs at 100–2,000 employee SaaS companies and agile scale-ups. These are organizations moving fast, competing with better-resourced rivals and demanding tools that are as ambitious as they are.

Key platform capabilities at launch include:

- Multi-agent orchestration: deploy specialized AI agents for marketing, content, sales ops, data and more.
- Workflow automation: design and run complex, multi-step workflows connecting tools, teams and data.
- Model-agnostic architecture: bring your own API keys; supports all major AI providers.
- Private cloud deployment: enterprise-grade security and data sovereignty.
- 1,000+ native integrations: from Google Workspace and HubSpot to Slack, LinkedIn and beyond.

Built in Britain. Trusted everywhere. Privacy and security by design.

UnaGo holds a distinct advantage in an increasingly regulated AI landscape: it is the only AI-native multi-agent platform built and headquartered in the United Kingdom, with data privacy and security embedded at the architectural level, not bolted on as an afterthought. Built in full compliance with the UK and EU General Data Protection Regulation (GDPR), UnaGo ensures that every workflow, agent interaction and data exchange is governed by the highest standards of privacy by design and data minimization. The platform supports private cloud deployment, giving enterprise customers full data sovereignty and the assurance that sensitive business information never leaves their controlled environment. In a market where trust is the deciding factor, UnaGo's British-built foundation and its commitment to regulatory compliance make it the natural choice for European businesses that cannot afford to compromise on security and won't have to.

Pricing and availability

UnaGo is available starting 2 June 2026 at unago.ai. Pricing information and plan details are available on the website.

About UnaGo / HyperionWave Limited

UnaGo is the flagship product of HyperionWave Limited. HyperionWave builds AI-native infrastructure and intelligent agent platforms that give lean, ambitious teams the execution power of enterprises. UnaGo's mission is simple: give people back time for work that matters.
