

Jaypee® India Limited Introduces High-Performance Passenger Hoist Systems for Modern Construction Sites

Jaypee® is a leading passenger hoist manufacturer in India, supplying CE-certified rack-and-pinion hoists to high-rise construction sites across Mumbai, Delhi, Hyderabad, Kolkata, and Chennai.

kolkata, West bengal May 25, 2026 (Issuewire.com) - With the rapid growth of high-rise construction and infrastructure development, the demand for safe and efficient vertical transportation systems has significantly increased. Meeting this growing industry need, [Jaypee® India Limited](http://JaypeeIndia.com) continues to deliver technologically advanced Passenger Hoist solutions engineered for performance, reliability, and worker safety on construction projects of every scale.

The company's advanced Passenger Hoist systems are specially designed for transporting workers and construction materials efficiently across multi-storey buildings, industrial projects, metro rail developments, bridges, and infrastructure sites. Manufactured using high-grade components and modern engineering practices, the hoists provide smooth operation even under challenging site conditions.

Jaypee® Passenger Hoists are equipped with rack & pinion drive technology that ensures stable lifting operations with enhanced safety control. These hoists are available in various capacities and configurations, making them suitable for both medium and large-scale construction applications.

The Passenger Hoist range features:

- High load carrying capacity
- Strong and durable cage structure
- VFD-controlled smooth start and stop
- PLC-based safety monitoring systems
- Emergency braking systems
- Easy installation and dismantling
- Weather-resistant galvanized mast sections
- User-friendly control panels
- Low maintenance operation

Designed for superior operational efficiency, the Passenger Hoists help construction companies reduce downtime, improve workforce mobility, and enhance overall project productivity. The systems are widely preferred by contractors and builders looking for dependable vertical transport equipment that complies with international safety standards.

A company representative from [Jaypee® India Limited](#) stated, “Safety and efficiency are the top priorities in today’s construction industry. Our Passenger Hoist systems are built to provide reliable vertical transportation while supporting faster project completion and improved site management.”

Jaypee® India Limited has built a strong reputation in the construction equipment industry through decades of innovation, engineering expertise, and customer-focused service. The company supplies Passenger Hoists to construction and infrastructure companies across India and several global markets.

Applications of Passenger Hoists include:

- Residential tower projects
- Commercial high-rise buildings
- Industrial construction sites
- Infrastructure and metro rail projects
- Power plants and refineries
- Bridge and chimney construction

The company also provides installation guidance, technical support, maintenance services, and spare parts assistance to ensure uninterrupted equipment performance throughout project execution.
