

# Kantoorschoonmaak in Amsterdam Launches Online Platform for Office and Business Cleaning Requests Across the City

Kantoorschoonmaak in Amsterdam launches an online platform where businesses of any type can request office and commercial cleaning services in the city.

**Amsterdam, Noord-Holland May 17, 2026 ([IssueWire.com](https://www.IssueWire.com))** - Kantoorschoonmaak in Amsterdam has launched an online platform that allows organizations in the Amsterdam region to request office and business cleaning services through a single online form. The platform is available at [kantoorschoonmaakinamsterdam.nl](https://kantoorschoonmaakinamsterdam.nl).

The service is aimed at companies that need recurring or one-time cleaning for their premises. According to the company, requests are accepted from any type of business, including offices, retail stores, hotels, restaurants, production facilities, warehouses, medical practices, and other commercial locations.

Through the website, a business describes its location, the type of premises, the approximate surface area, and how often cleaning is required. The platform then matches the request with a cleaning plan and provides a quotation. The company states that the process is intended to reduce the time organizations spend comparing providers and arranging contracts.

"Organizations across Amsterdam manage very different types of buildings, and many of them want one point of contact to arrange cleaning rather than approaching several suppliers," said [Spokesperson Name], [title] at Kantoorschoonmaak in Amsterdam. "The platform was set up so that a company can submit one request and receive a proposal that fits the type of building it operates, whether that is an office floor, a shop, or a production hall."

The platform covers Amsterdam and the surrounding municipalities. Services that can be requested include regular office cleaning, periodic deep cleaning, glass and window cleaning, sanitary maintenance, and cleaning for specialized environments such as hospitality and production sites. The company notes that the scope of each assignment is confirmed with the client before work begins.

The launch responds to demand from facility managers and small business owners who, according to the company, often lack the time to source and compare cleaning suppliers individually. By centralizing the request process, the company aims to make it easier for businesses without a dedicated facilities department to arrange cleaning.

Kantoorschoonmaak in Amsterdam confirmed that the platform is now active and accepting requests from businesses in the Amsterdam region. Additional service areas may be added at a later stage.
