

Live Eye Monitoring Launches Real-Time Live Video Monitoring Across Canada

Live Eye Monitoring introduces live video monitoring — professional, 24/7 remote surveillance that detects threats instantly and protects businesses, assets, and communities across Canada.

Fredericton, New Brunswick May 12, 2026 ([IssueWire.com](http://www.IssueWire.com)) - Live Eye Monitoring, a leading provider of remote surveillance solutions in Canada, today announced the official launch of its advanced [live video monitoring service](#) — a proactive security solution designed for businesses, commercial

properties, industrial sites, and residential communities nationwide.

Unlike conventional CCTV systems that record footage for review after an incident, Live Eye Monitoring's new service deploys trained security agents who watch live camera feeds around the clock. When a threat or anomaly is detected, agents respond in real time — alerting authorities, deterring intrusions, and preventing losses before they escalate.

Key Features

24/7 Active Agent Monitoring — Human-reviewed surveillance, every hour of every day, with no gaps in coverage.

Real-Time Threat Response — Suspicious activity is assessed and acted upon the moment it occurs.

Custom Surveillance Plans — Each deployment begins with a dedicated consultation, followed by a tailored security architecture built around the client's specific property and risk profile.

Multi-Sector Coverage — Service is designed for commercial properties, car parking facilities, casinos, industrial sites, cargo transport operations, and community environments.

Rapid Installation and Activation — A structured onboarding process moves clients from initial consultation to a fully operational system efficiently and without disruption.

Business and Operational Benefits

Live video monitoring addresses a critical gap in traditional security: the lag between an incident occurring and a response being mounted. By placing trained professionals behind camera feeds in real time, clients experience measurable reductions in theft, vandalism, and unauthorized access. The service also reduces the operational and psychological burden on business owners who have previously relied on passive recording systems.

For after-hours operations, remote sites, and high-value asset environments, the service delivers continuous protection without the overhead of on-site guard deployment.

Availability

Live video monitoring is available now across Canada. Businesses and property managers can request a no-obligation consultation directly through the company's website.

About Live Eye Monitoring

Live Eye Monitoring, operating under Eagle Eye One Solutions, provides remote video monitoring and real-time surveillance solutions for homes and businesses throughout Canada. The company is committed to delivering affordable, professional-grade security tailored to each client's environment.
