

# Mango AI Launches an AI Dance Generator for Accessible Dance Video Creation

Mango AI introduces an AI dance generator that enables users to convert images into engaging dance videos by uploading photos and providing motion reference videos.

**Hong Kong, Hong Kong S.A.R. May 31, 2026 ([Issuewire.com](https://www.issuewire.com))** - Mango AI, developed by Mango Animate, offers an [AI dance](#) generator that transforms still images into short animated dance videos. Designed for social content creation and casual entertainment, the tool streamlines dance-style content production, making animated visual storytelling more accessible without requiring video editing knowledge or specialized software.

The AI dance generator operates through a straightforward process. Users upload a front-facing, full-body photo of the subject. They then provide a video of a person dancing to serve as the motion reference. The tool transfers the choreography onto the subject in the photo, creating a synchronized dance video.

For greater flexibility, the AI dance generator supports image uploads in JPG, JPEG, PNG, and WebP formats. Dance reference videos may be uploaded with a maximum length of 30 seconds and a file size of up to 50MB. Users without ready materials can try the tool using sample photos and preloaded dance videos on the platform before uploading their own content.

The AI dance generator relies on AI-powered motion transfer and pose analysis technology to generate fluid body movements and rhythmic transitions. These technologies help maintain visual consistency while translating movements from the reference dance clip into a cohesive animation.

Generated dance clips can be downloaded in MP4 format, while shareable links and QR codes enable quick access across different devices and platforms. In addition, the tool supports direct posting to social media platforms such as Facebook and X, streamlining the process of publishing short-form video content.

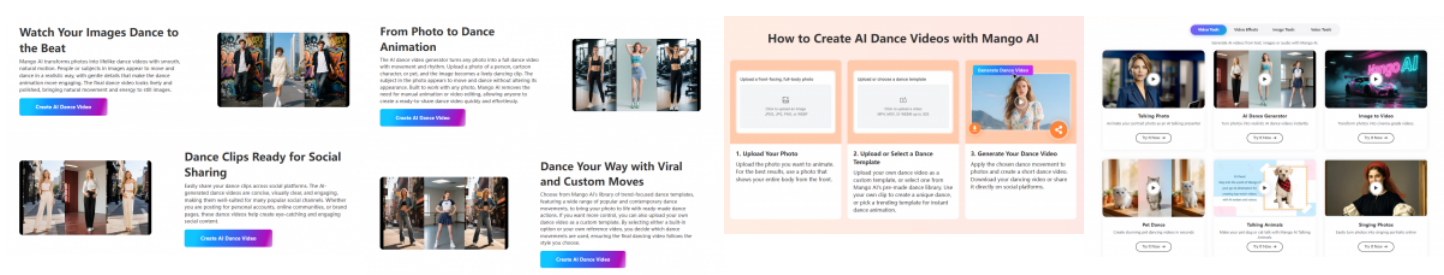

In addition to the AI dance generator, Mango AI offers a [pet dance](#) creator that enables users to create realistic pet dance videos by uploading an image of the animal along with a reference dance video. The platform also provides a [picture to dance](#) maker, which allows users to select a dance style and upload a photo to produce engaging dance videos. These additional tools further expand the platform's creative possibilities across different forms of AI-generated dance content.

"The AI dance generator makes it possible for anyone to create dynamic dance videos with smooth and natural motion," said Winston Zhang, CEO of Mango Animate. "It can be used for a range of purposes, including social media content, personal projects, and casual entertainment."
