

MGI Challenges Industry Status Quo with InsurTech Infrastructure Launch at JCK 2026

Los Angeles, California May 25, 2026 (Issuewire.com) - MGI, the premier InsurTech and logistics partner for the high-value jewelry trade, is proud to announce its inaugural presence at [JCK Las Vegas 2026](#). From May 29 to June 1, MGI will be in conversation about its logistics framework and proprietary intelligence layer at The Venetian Expo, **Level 1, Booth 48121**.

As the jewelry industry faces rising operational costs and increasingly sophisticated cargo threats, MGI is transitioning logistics in the trade from simple point-to-point deliveries to a comprehensive Logistics-Trust Ecosystem. By layering a proprietary AI risk engine on top of the FedEx network, MGI allows jewelry leaders to "de-risk" their global supply chains.

"MGI isn't just another service provider; we are building a proprietary AI platform that creates a 'data moat' for our clients," said **Sam Kalra, CEO of MGI**. "At Booth 48121, we are discussing how our Hybrid AI Risk Engine and Address Scoring technology mitigate operational friction and protect high gross margins that define a premium jewelry business".

The Future of Logistics-Trust at Booth 48121:

- **Hybrid AI Risk Engine:** Experience the core of the MGI platform, a predictive engine that merges internal historical data with real-time external intelligence from high-quality third party providers to anticipate theft "hot zones" and hub-level disruptions.
- **Predictive "Red-Zoning" & Address Scoring:** Every destination is scored for risk, with high-threat locations triggering automated security overrides, such as secure "Hold for Pickup," to eliminate last-mile delivery vulnerabilities.

- **The Technical Roadmap:** Get a glimpse of MGI's advanced technology layer, including IoT Smart Seals for tamper alerts, Blockchain Digital Passports for immutable transit records, and Computer Vision for secure pre-shipment warehouse operations.
- **Institutional-Grade Liquidity:** Learn about MGI's high-capacity underwriting, backed by a policy placed at Lloyd's of London, proven by recent six-figure international loss payouts.
- **Proprietary Risk-Management Features:** An internal intelligence layer that proactively identifies network friction and security vulnerabilities to keep your assets moving safely

MGI invites all JCK attendees to move beyond standard shipping and experience the future of secure asset orchestration. Visit the team at **Level 1, Booth 48121**, to learn how to leverage a technical edge to protect your inventory and your bottom line.

About MGI:

Founded in Los Angeles, MGI is a premier InsurTech and logistics infrastructure provider. By layering a proprietary intelligence engine over the global FedEx network, MGI provides the jewelry, watch, diamond, and precious metal industries with a Logistics-Trust Ecosystem. We combine technical prowess, including AI-driven risk mitigation and blockchain-backed custody, with bespoke customer support and Lloyd's of London-backed insurance to offer a smarter, safer way to move what matters most.

About JCK:

The award-winning JCK show, which is regarded as the most significant jewelry exhibition in the world, unites the industry to buy, sell, network, learn, and explore, giving the worldwide jewelry and watch trade community the ideal stage for business success. JCK is the most significant gathering for jewelry, a one-stop shop with the widest range of experts and goods. With 18,000 participants and more than 1,900 exhibitors each year, JCK provides unparalleled access to quality buyers and sellers and has been a launchpad for jewelry trends, products, and brands for thirty years. Here, the jewelry and watch industries, along with their media partners, come together to do business, establish important relationships, and find inspiration throughout many days of amazing experiences and product discovery.
