

Muslim AI Companion Expands Global Reach After Early Investment from HASAN.VC

The App has already reached users in more than 160 countries — including a growing user base from the United States, which now represents approximately 5% of total users.

Jakarta, Indonesia May 20, 2026 ([IssueWire.com](https://www.issuewire.com)) - [Muslim AI Companion](#), an Indonesia-based ethical AI startup focused on spiritual wellness and emotionally supportive technology, announced that it has secured an early-stage investment from [HASAN.VC](#), a venture capital firm backing values-driven and impact-oriented innovation across the global Muslim ecosystem.

The startup, which positions itself as a faith-conscious AI companion rather than a conventional chatbot, says its platform has already reached users in more than 160 countries — including a growing user base from the United States, which now represents approximately 5% of total users.

Founded by Indonesian entrepreneur Mita, Muslim AI Companion aims to create a safer and more compassionate AI environment where users can reflect, learn, and seek emotional support through guidance inspired by Islamic values.

“We believe the future of AI should not only be intelligent, but also responsible and emotionally aware,” said Mita, founder of Muslim AI Companion.

“Technology should help people feel understood, supported, and connected — not overwhelmed.”

Growing Interest in Ethical and Faith-Conscious AI

The investment reflects broader momentum in ethical AI and values-based technology, particularly within the rapidly growing Muslim digital economy.

HASAN.VC, known for supporting halal, ethical, and socially impactful startups, has increasingly focused on companies operating at the intersection of technology, spirituality, and community well-being.

Industry observers say the rise of platforms like Muslim AI Companion highlights a growing shift in consumer expectations around AI products—especially among younger generations seeking safer, more human-centered digital experiences.

Unlike many mainstream AI platforms optimized primarily for engagement and scale, Muslim AI Companion emphasizes:

- emotionally supportive interaction,
- ethical safeguards,
- culturally sensitive responses,
- and faith-conscious guidance.

The platform describes itself as a “digital companion” designed to help users navigate daily life, personal reflection, and emotional wellness in a judgment-free environment.

Expanding Beyond Traditional Islamic Apps

Muslim AI Companion is part of a new wave of startups redefining what Islamic technology products can look like in the AI era.

Rather than focusing solely on utilities such as prayer schedules or Quran access, the platform positions itself around companionship, emotional reflection, and values-based interaction.

The company says its user base spans Southeast Asia, the Middle East, Europe, Africa, and North America, with the United States emerging as one of its notable growth markets.

It also notes that the platform is intended not only for Muslims, but also for non-Muslims interested in exploring Islamic values through a more approachable and compassionate digital experience.

Shariah Advisory and Ethical Oversight

To strengthen its ethical and religious foundations, Muslim AI Companion has engaged with local and international scholars and advisory experts, including Kuala Lumpur-based ADL Advisory.

ADL Advisory is a registered Shariah adviser with the Securities Commission Malaysia and Labuan FSA, as well as an AAOIFI Training Partner and Examination Centre operating across more than 20

countries.

The company clarified that the advisory engagement remains part of an ongoing review and development process, and that no formal Shariah certification has been issued at this stage.

Muslim AI Companion also emphasized that the platform is not intended to replace qualified religious scholars or serve as a fatwa service.

Instead, it is designed as a supportive educational tool that encourages reflection, learning, and deeper engagement with trusted scholars and communities.

International Recognition

The startup has also received international recognition through the International Ma'a Award Prize in the Ibadah category by **Global Sadaqah**, recognizing its efforts to combine technology with meaningful spiritual and social impact.

As global conversations around AI safety, emotional wellness, and ethical technology continue to grow, Muslim AI Companion hopes to position itself within a broader movement toward more responsible and human-centered AI development.

About Muslim AI Companion

Muslim AI Companion is an AI-powered platform focused on emotional wellness, spiritual reflection, and faith-conscious digital support. Founded in Indonesia, the platform combines artificial intelligence with compassionate and ethically guided interaction to provide users with a safe space to reflect, learn, and grow.
