

Muslim AI Companion Used in 160 Countries, Supported by Hasan VC Becomes a Muslim Super App!

The platform celebrates its 1st anniversary, passing Shariah screening and evolving into a global Muslim super-app used across 160 countries, including the USA. Backed by HASAN.VC, it launches Muslim Market, Aggregator Social Charity, & Modern Media.

Jakarta, Indonesia May 20, 2026 (IssueWire.com) - Moving beyond conventional technology archetypes, [Muslim AI Companion](#) has officially debuted on the global stage as the premier digital ecosystem specifically designed for the global Muslim community. In an aggressive international tech race dominated by speed and automation, this platform has successfully captured the attention of the global technology ecosystem by offering a fundamentally different, value-driven approach. Muslim AI Companion positions itself as a pioneer in digital companionship, focusing extensively on spiritual wellness, emotional support, and the implementation of ethical AI (Ethical AI) that genuinely humanizes the digital experience for millions of believers worldwide.

Proving its massive cross-border appeal, the platform has rapidly transitioned away from regional boundaries and is currently utilized by a highly engaged global audience across more than 160 countries, including a rapidly growing user base in the United States (USA), Europe, and the Middle East. Marking a monumental milestone in its expansion, the global startup recently secured seed funding from [HASAN.VC](#), a prominent international venture capital firm known for its highly selective, value-driven, and socially sustainable investments.

Celebrating One Year: Evolving into a Comprehensive Global Muslim Super-App

Commemorating its first anniversary, Muslim AI Companion has announced a significant evolution in its service ecosystem, transitioning from an advanced digital companion into a holistic global Muslim community platform. To mark this milestone, the platform has officially launched a suite of next-generation features designed to meet the diverse daily and socio-economic needs of the global Ummah.

The application now features a Global Charity Aggregator built in collaboration with international Social Charity Program to streamline transparent global donations. In anticipation of Eid al-Adha, it introduces a digitized Qurban Distribution Channel to facilitate seamless livestock distribution across borders. Furthermore, the ecosystem is expanding with the launch of the Muslim Market, a specialized ethical e-commerce hub, and Muslim Pay, a secure digital payment infrastructure designed for faith-conscious financial transactions. This strategic expansion solidifies Muslim AI Companion's transformation into an all-in-one digital sanctuary and lifestyle ecosystem for the modern Muslim world.

Enriching the Digital Experience with Modern Islamic Media

Beyond providing AI companionship focused on spiritual and emotional wellness, Muslim AI Companion is expanding its platform by developing an immersive array of Islamic podcasts and video dawah content. These multimedia features are specifically designed to help users acquire authentic Islamic knowledge through warm, light, and engaging audio-visual experiences tailored for today's modern digital generation.

The multimedia library encompasses foundational Islamic teachings, life reflections, inspirational wisdom stories, spiritual documentaries, and narrative storytelling highlighting the role of a Muslim AI companion in everyday life. Furthermore, the platform is developing a dedicated series on the Stories of the Prophets, beginning with Prophet Adam (A.S.) and continuing through the chronological prophetic history. This content is beautifully repackaged into contemporary visual and audio formats to foster a deeper, closer connection with young global Muslims.

To ensure absolute compliance, Muslim AI Companion emphasizes that all multimedia productions undergo rigorous review and engagement processes with qualified Shariah advisors alongside local and global scholars. This foundational oversight guarantees that all published content strictly aligns with Islamic principles, ethical values, and theological accuracy before being released to the public.

Shifting the Paradigm: AI with "Heart" and Empathy for a Global Audience

While standard AI narratives continuously revolve around technological transactional speed—such as writing code or generating instant reports—Muslim AI Companion disrupts these boundaries by creating a digital experience that is deeply human, warm, and highly relevant to the inner, daily needs of modern Muslims. Designed as a digital oasis amidst the hustle and psychological pressures of modern life, the application serves as a supportive global space for daily reflection, exploring spiritual depth, and seeking emotional reassurance. It functions internationally as a safe, compassionate, and entirely judgment-free space for dialogue.

Mita, the Founder of Muslim AI Companion, emphasized that the core vision behind the platform extends far beyond regional or technical ambition. "Muslim AI Companion is not just an application; it is a true global companion for the modern Ummah. We aim to build a secure, world-class digital sanctuary where individuals from all walks of life feel genuinely understood, morally supported, and gently guided through empathy and spiritual growth anchored in universal Islamic principles," Mita stated.

Global Capital as Validation for Faith-Conscious Tech

Securing the backing of a world-class investor like HASAN.VC serves as a strong international validation that the trends of ethical AI and faith-based technology are taking center stage in the mainstream global tech industry. HASAN.VC maintains strict investment criteria, backing only forward-thinking innovators who seamlessly merge sophisticated technology with long-term, positive social impact for the global Muslim community.

Through Muslim AI Companion, the startup has proven that faith-conscious innovation can seamlessly scale to a global enterprise level, serving users from diverse cultural backgrounds under one unified digital ecosystem. The capital injection will be heavily utilized to further develop an advanced AI framework that is ethical, safe, and profoundly sensitive to the cultural and spiritual values of its international users.

Forging Global Standards with International Shariah Advisors

In alignment with the growing global emphasis on responsible AI, Muslim AI Companion has taken proactive measures to solidify its ethical foundation and Shariah alignment from its early stages. As part of this commitment, Muslim AI Companion is actively engaged in a strategic advisory process with ADL Advisory, a premier global Shariah advisory firm based in Kuala Lumpur. Operating across more than 20 countries, ADL Advisory is widely recognized for its extensive expertise in Islamic finance, technology, and value-driven business ecosystems.

ADL Advisory is a Registered Shariah Adviser under the Securities Commission Malaysia and Labuan FSA, as well as an AAOIFI Training Partner & Examination Centre. This international advisory engagement is for development of Muslim AI Companion within the corridors of ethical AI and Shariah principles.

Furthermore, Muslim AI Companion has successfully passed the Shariah screening process required by faith-conscious and halal-based investors like HASAN.VC to select viable startups for their ethical venture capital ecosystem. Within the Shariah-compliant venture capital framework, startups backed by such investments must clear comprehensive preliminary reviews covering their business models, product development trajectory, ethical aspects, potential Shariah alignment, and broader social impact. This milestone demonstrates that Muslim AI Companion has proven to possess a solid foundation in ethical business and value alignment, perfectly matching the faith-conscious innovation approach that remains the core focus of HASAN.VC.

A Supportive Companion, Not a Legal Authority

The management explicitly clarifies that Muslim AI Companion does not issue fatwas (formal legal rulings) and is not a substitute for traditional Islamic scholars, teachers, or muftis. Instead, the platform is strictly positioned as a supportive digital companion to assist users in personal learning, self-reflection, and individual spiritual growth.

Media & Download Information:

Muslim AI Companion has garnered international acclaim, including winning the prestigious International Ma'a Award Prize in the Ibadah category from GlobalSadaqah for its outstanding contribution to technology with spiritual and social impact.
