

# News Announcement - Sectonics enters the AI security space with CyCraft

Sectonics signs as the India region distributor for CyCraft Technology.

**Mumbai, Maharashtra May 6, 2026 ([Issuewire.com](https://www.issuewire.com))** - Sectonics is starting **FY 26-27** on a high note by entering in the space of AI security. Sectonics is officially joining forces with CyCraft Technology, as their distributor for India market.

CyCraft is a Taiwan-based leading AI cyber security company, specialising in automated threat detection, incident response, and security operations. CyCraft solution ranges from AI powered security to securing AI. XCockpit the comprehensive Extended Attack Surface Management platform, XecGaurd the LLM Firewall, XecART the AI Red Teaming Security Assessment Service as well as SEMI E187 Compliance Assessment Tool specialized for Semiconductor industry.

**Vikas Chalke - Founder & Director @Sectonics Private Limited, said**

*"With increasing proliferation of AI across business operations, concerns related to associated threats has also grown substantially. Adding a strong AI security solution to the portfolio was on top of our expansion plan entering in 2026. We were on a hunt for a vendor with strong AI expertise, and our search ended with CyCraft.*

*This partnership addresses the dual challenge of leveraging AI for defence, as well as securing the AI*

*infrastructure itself. We believe CyCraft is a perfect vendor for Indian market. Indian SMB & SME sector needs AI powered autonomous security tools to deal with sophisticated cyberattacks. Whereas large Indian enterprises who have invested heavily on their digital transformation journeys over last few years, desperately need robust technology to protect their LLMs, generative / agentic AI models from targeted attacks.*

***It is time for India to use AI to protect AI from AI. With CyCraft offerings, Sectonics is geared to assist Indian enterprises in this mission. We are really excited about this new partnership.”***

**Benson Wu – CEO @ CyCraft Technology, said:**

*“As organisations scale AI and digital initiatives, boards and leadership teams are asking a clear question: how do we reduce material cyber risk while keeping operations resilient? That requires more than alerts – it requires continuous visibility into exposure and a practical way to prioritise what to fix first.*

*CyCraft’s AI-driven pre-emptive security helps teams understand how attackers can move through their environment, focus remediation on the highest-impact paths, and strengthen control coverage across external, identity, and endpoint layers.*

*With Sectonics, we’ll bring this capability to Indian enterprises and their partners – helping security leaders improve posture and demonstrate progress as their organisations adopt AI at scale.”*

**About Sectonics:**

Sectonics Private Limited is the cybersecurity VAD head quartered in Mumbai, India. With 10+ technology vendors and almost 200 channel partners, Sectonics is one of the prominent players in the Indian cybersecurity market.

Sectonics carries wide range of technology bouquet which secures key areas like identity, data, application, host, cloud as well as AI for any enterprise. Our solution range caters to customers across varied industries and market segments. Our strive to stay one step ahead of the bad actors drives our relentless technology study & search for next gen solution.

**About CyCraft Technology**

CyCraft Technology Corporation (TWSE: 7823) is a Taiwan-based, AI-native cybersecurity company founded in 2017, focused on pre-emptive security and autonomous defence. Trusted by governments, financial institutions, and enterprises across Asia-Pacific, CyCraft helps security teams reduce exposure and improve resilience by unifying External Attack Surface Management (EASM), Identity Attack Surface Management (IASM), Endpoint Detection & Response (EDR), Managed Detection & Response (MDR), AI Red Teaming (XecART), and AI/LLM security (XecGuard) into a single platform view of

organisational risk.

CyCraft helps security teams validate which exposures are most likely to be used in attacks, prioritise remediation, and automate response – supporting measurable improvements in security posture and day-to-day operations. The company operates across Taiwan, Japan, Singapore, Australia, New Zealand, and India.
