

Privacy-first Tech Company topriv Launched an Open-Source Encrypted File Format for Ultimate Protection

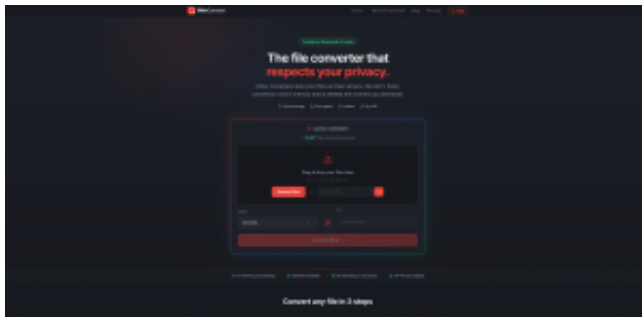

Tel Aviv, Israel May 23, 2026 ([Issuewire.com](https://www.issuewire.com)) - Privacy is one of the biggest concerns in the tech industry, and considering the immense need for file protection, a privacy-first tech company, topriv, has come up with a new format. This new open-source encrypted file format is called [.priv format](#), which makes the file eligible for Zero-Knowledge File Protection. By utilizing AES-256-GCM with zero-knowledge architecture, the company has revolutionized the idea of file protection while offering more ease, convenience, and privacy for the users. The company understands the security risks in this digital age, and they have addressed the issue with the most effective solution. The file stays inside the encrypted payload, and it remains invisible with the right password.

Interested users can also find a converter launched by the platform that allows users to convert their files in the .priv format. The [PrivConvert](#) is an efficient tool where every conversion runs through memory and gets deleted as soon as the task is done. The tool respects the privacy of each user, and unlike other converters, it does not store the files on the servers. The file converter is super easy to use, and every file can be formatted within 3 easy steps.

The platform provides 100+ tools for file and security-related issues as it strives to provide the utmost security for each user. Each of the tools on the platform can be accessed for free by users. For example,

users can also find [PrivDrop](#), a tool that is specially designed for secured file transfer. In this tool, users can get an encrypted link for sharing a file, and the recipient with the encrypted link will be able to download it. The platform never checks or stores user data in order to provide 100% transparency and privacy with complete security.

Being one of the leading privacy-first technology companies, topriv is dedicated to making tools that can protect user data by design. The latest innovation of open-source encrypted file format integrates a zero-knowledge architecture, which provides an effective solution to data security, which is also one of the major concerns in the modern digital world. The company understands the vulnerability of users in the online landscape and ensures the protection of their sensitive files and personal data through ethically innovative ways. All tools are free at core, which makes [topriv](#) a reliable partner for the global online users. Visit the official website to leverage the dynamic tools for free.
