

Susan H. Munson, BS, RCS, RDMS, RVS, Brings Expertise In Cardiac Sonography And Medical Imaging Innovation Leadership

Veteran Clinical Educator and Registered Sonographer Combines Advanced Diagnostic Imaging Experience with a Passion for Teaching and Healthcare Technology

Hendersonville, Tennessee May 19, 2026 ([IssueWire.com](http://www.IssueWire.com)) - Susan H. Munson, BS, RCS, RDMS, RVS, is a highly accomplished cardiac and vascular sonographer with more than 25 years of experience

in medical imaging, ultrasound education, and clinical applications. Known for her expertise across multiple sonography specialties, Susan continues to make a meaningful impact in patient care, diagnostic accuracy, and healthcare education through her work at HCA TriStar Skyline Medical Center in Nashville, Tennessee.

Currently serving as a Clinical Educator and Cardiac Sonographer, Susan performs a broad range of advanced echocardiographic procedures, including transthoracic echocardiograms, transesophageal studies, stress echocardiography, bubble studies, and Definity-enhanced imaging. Registered in multiple sonography modalities, including RDMS (Abdomen) and CCI RVS (Vascular), she is widely respected for her precision, technical skill, and collaborative approach to supporting physicians and healthcare teams in delivering high-quality patient care.

A graduate of the University of Tennessee, Susan has built a career that uniquely combines clinical excellence with strong business and technology experience. In addition to her extensive hands-on imaging background, she spent more than a decade working in ultrasound applications, IT integration, and medical equipment support with organizations including Mindray North America and FUJIFILM Healthcare Americas Corporation. In these roles, she provided clinical applications training, workflow optimization, and digital imaging support to healthcare providers across the country.

This combination of technical expertise and clinical insight has enabled Susan to effectively bridge the gap between patient care and advancing medical technology. Her ability to understand both the operational and clinical sides of ultrasound imaging has made her a valuable resource to hospitals, clinicians, and educational programs alike.

Education remains one of Susan's greatest passions. She previously served as an adjunct professor at Vanderbilt University School of Nursing, where she trained nurse practitioner students in point-of-care ultrasound and focused assessment techniques. She continues to consult with emerging nurse practitioner programs while exploring opportunities to develop her own ultrasound education initiatives.

"What I enjoy most is helping people," says Susan. "I really love ultrasound — everything about ultrasound — and I love teaching. If I don't understand something, I try to find out why. I'm always questioning why, because I'm genuinely passionate about this work and sharing that knowledge with others."

Looking ahead, Susan plans to continue advancing her work in cardiac sonography, intraoperative imaging applications, and ultrasound education. Through her commitment to innovation, mentorship, and lifelong learning, she continues to help shape the future of diagnostic imaging and medical education.
