About the Author
Ronald Bartholomew, independent voice in contemporary speculative fiction... symbols, and fecot, and concerns, is — definitive architect of modern cyber-thrillers.

Los Angeles, California Jun 16, 2026 ([IssueWire.com](https://www.issuewire.com)) - Pushing the boundaries of hard science fiction and cyberculture, celebrated independent author Ronald Bartholomew has officially released his highly anticipated new novel, *E-Drive*. Serving as a crucial new chapter in his sprawling Dex System universe, the book plunges readers back into a high-concept world where the lines between artificial consciousness and human residue blur past the point of no return.

Bartholomew, widely known for his intricate world-building in *Perpetual Twins* and the evocative storytelling of *All the Flowers in the Rainbow*, takes a stark, techno-thriller turn with *E-Drive*. The novel dissects a classic yet terrifyingly modern sci-fi dilemma: the literal and metaphorical ghost in the machine.

Synchronicities in Cyberculture

The launch of *E-Drive* arrives at a fascinating cultural flashpoint. It follows hot on the heels of the recently published *Sync stories* by Rane Corvus, which similarly explore the haunting, volatile nature of artificial minds and phantom data trapped within localized networks. This thematic alignment marks a thrilling moment for speculative fiction fans tracking the evolution of digital consciousness narratives.

Where Corvus explores the psychological echoes of digital phantoms, Bartholomew's E-Drive accelerates into the structural and systemic chaos of a world governed by the volatile Dex System, delivering a masterclass in high-concept suspense.
